## Using Aldus Pagemaker 40:

**Global Software** Dave Taylor,2012-12-06 John Sculley In the short history of personal computing the task of the software programmer has been one of the least recognized but one of the most significant in the industry In addition to defining the problems and presenting the solutions the software programmer is confronted with the challenge of having to predict what combination of ideas and technologies will move the industry forward in the most compelling way Even though we've seen the development of tremendous applications in a surprisingly short period of time the most difficult problems often surface when we try to elevate a successful local idea to the international arena In the case of Apple Computer these challenges become especially profound when you consider that Apple sells Macintosh not just in the United States but in Japan China the Middle East Africa Eastern Europe and even to the United Nations itself Of course this means that the personal computer must work everywhere around the world But more significantly it also means that the software must reflect the uniqueness of a given culture its language morals and even its sense of humor To step away from a narrowly defined nationally based paradigm for software development programmers management and entire corporations must learn to recognize what elements of an interface problem solving technique documentation illustration package design and advertisement are local and which elements are appropriate for global markets
