contributes to this tradition

Typed Lambda Calculi and Applications Marc Bezem, 1993-03-03 The lambda calculus was developed in the 1930s by Alonzo Church. The calculus turned out to be an interesting model of computation and became the prototype for untyped functional programming languages. Operational and denotational semantics for the calculus served as examples for other programming languages. In typed lambda calculi, lambda terms are classified according to their applicative behavior. In the 1960s it was discovered that the types of typed lambda calculi are in fact appearances of logical propositions. Thus there are two possible views of typed lambda calculi as models of computation: where terms are viewed as programs in a typed programming language, or as logical theories where the types are viewed as propositions and the terms as proofs. The practical spin-off from these studies are functional programming languages which are mathematically more succinct than imperative programs, systems for automated proof checking based on lambda calculi. This volume is the proceedings of TLCA 93, the first international conference on Typed Lambda Calculi and Applications, organized by the Department of Philosophy of Utrecht University. It includes 29 papers selected from 51 submissions.

Typed Lambda Calculi and Applications Simona Ronchi Della Rocca, 2007-07-11 This book constitutes the refereed proceedings of the 8th International Conference on Typed Lambda Calculi and Applications TLCA 2007 held in Paris, France, in June 2007, in conjunction with RTA 2007, the 18th International Conference on Rewriting Techniques and Applications, as part of RDP 2007, the 4th International Conference on Rewriting, Deduction and Programming. The 25 revised full papers presented together with 2 invited talks were carefully reviewed and selected from 52 submissions. The papers present original research results that are broadly relevant to the theory and applications of typed calculi and address a wide variety of topics such as proof theory, semantics, implementation, types, and programming.

Typed Lambda Calculi and Applications Philippe de Groote, J. Roger Hindley, 1997-03-12 This book constitutes the refereed proceedings of the Third International Conference on Typed Lambda Calculi and Applications TLCA 97 held in Nancy, France, in April 1997. The 24 revised full papers presented in the book were carefully selected from a total of 54 submissions. The book reports the main research advances achieved in the area of typed lambda calculi since the predecessor conference held in 1995 and competently reflects the state of the art in the area.

Typed Lambda Calculi and Applications Jean-Yves Girard, 1999-03-24 This book constitutes the refereed proceedings of the 4th International Conference on Typed Lambda Calculi and Applications TLCA 99 held in L'Aquila, Italy, in April 1999. The 25 revised full papers presented were carefully reviewed and selected from a total of 50 submissions. Also included are two invited demonstrations. The volume reports research results on various aspects of typed lambda calculi. Among the topics addressed are noncommutative logics, type theory, algebraic data types, logical calculi, abstract data types, and subtyping.

Semantics of the Probabilistic Typed Lambda Calculus Dirk Draheim, 2017-02-28 This book takes a foundational approach to the semantics of probabilistic

programming It elaborates a rigorous Markov chain semantics for the probabilistic typed lambda calculus which is the typed lambda calculus with recursion plus probabilistic choice The book starts with a recapitulation of the basic mathematical tools needed throughout the book in particular Markov chains graph theory and domain theory and also explores the topic of inductive definitions It then defines the syntax and establishes the Markov chain semantics of the probabilistic lambda calculus and furthermore both a graph and a tree semantics Based on that it investigates the termination behavior of probabilistic programs It introduces the notions of termination degree bounded termination and path stoppability and investigates their mutual relationships Lastly it defines a denotational semantics of the probabilistic lambda calculus based on continuous functions over probability distributions as domains The work mostly appeals to researchers in theoretical computer science focusing on probabilistic programming randomized algorithms or programming language theory

Incrementality and Effect Simulation in the Simply Typed Lambda Calculus Lourdes del Carmen González Huesca, Université Paris Diderot - Paris 7 (1970-2019), 2015. Certified programming is a framework in which any program is correct by construction. Proof assistants and dependently typed programming languages are the representatives of this paradigm where the proof and implementation of a program are done at the same time. However it has some limitations a program in Type Theory is built only with pure and total functions. Our objective is to write efficient and certified programs. The contributions of this work are the formalization in the Simply Typed Lambda Calculus of two mechanisms to achieve efficiency to validate impure computations and to optimize computations by incrementality. An impure computation that is a program with effects and its validation in a functional and total language is done through a posteriori simulation. The simulation is performed afterwards on a monadic procedure and is guided by a prophecy. An efficient oracle is responsible for producing prophecies which is actually the monadic procedure itself translated into an effectful programming language. The second contribution is an optimization to perform incremental computations. Incrementality as a way to propagate input change into a corresponding output change is guided by formal change descriptions over terms and dynamic differentiation of functions. Displaceable types represent data changes while an extension of the simply typed lambda calculus with differentials and partial derivatives offers a language to reason about incrementality.
