Shing-Tung Yau, Shuxing Chen, 2002 This book presents the proceedings of a conference on geometry and nonlinear partial differential equations dedicated to Professor Buqing Su in honor of his one hundredth birthday It offers a look at current research by Chinese mathematicians in differential geometry and geometric areas of mathematical physics It is suitable for advanced graduate students and research mathematicians interested in geometry topology differential equations and mathematical physics      **Basic Linear Geostatistics** Margaret Armstrong, 1998-09-29 Based on a postgraduate course that has been successfully taught for over 15 years the underlying philosophy here is to give students an in depth understanding of the relevant theory and how to put it into practice This involves going into the theory in more detail than most books do and also discussing its applications It is assumed that readers students and professionals alike are familiar with basic probability and statistics as well as the matrix algebra needed for solving linear systems however some reminders on these are given in an appendix Exercises are integrated throughout and the appendix contains a review of the material

EEG/MEG Source Reconstruction Thomas R. Knösche, Jens Haueisen, 2022-10-01 This textbook provides a comprehensive and didactic introduction from the basics to the current state of the art in the field of EEG MEG source reconstruction Reconstructing the generators or sources of electroencephalographic and magnetoencephalographic EEG MEG signals is an important problem in basic neuroscience as well as clinical research and practice Over the past few decades an entire theory together with a whole collection of algorithms and techniques has developed In this textbook the authors provide a unified perspective on a broad range of EEG MEG source reconstruction methods with particular emphasis on their respective assumptions about sources data head tissues and sensor properties An introductory chapter highlights the concept of brain imaging and the particular importance of the neuroelectromagnetic inverse problem This is followed by an in depth discussion of neural information processing and brain signal generation and an introduction to the practice of data acquisition Next the relevant mathematical models for the sources of EEG and MEG are discussed in detail followed by the neuroelectromagnetic forward problem that is the prediction of EEG or MEG signals from those source models using biophysical descriptions of the head tissues and the sensors The main part of this textbook is dedicated to the source reconstruction methods The authors present a theoretical framework of the neuroelectromagnetic inverse problem centered on Bayes theorem which then serves as the basis for a detailed description of a large variety of techniques including dipole fit methods distributed source reconstruction spatial filters and dynamic source reconstruction methods The final two chapters address the important topic of assessment including verification and validation of source reconstruction methods and their

actual application to real world scientific and clinical questions This book is intended as basic reading for anybody who is engaged with EEG MEG source reconstruction be it as a method developer or as a user including advanced undergraduate students PhD students and postdocs in neuroscience biomedical engineering and related fields Twenty-Fourth Symposium on Naval Hydrodynamics National Research Council,Office of Naval Research, West Japan Society of Naval Architects,Division on Engineering and Physical Sciences,Naval Studies Board,2003-11-15 This report is part of a series of reports that summarize this regular event The report discusses research developments in ship design construction and operation in a forum that encouraged both formal and informal discussion of presented papers Polarization Remote Sensing Physics Lei Yan,Bin Yang,Feizhou Zhang,Yun Xiang,Wei Chen,2020-05-19 This book elaborates on the physical principles of polarization remote sensing It explains the reflective characteristics of surface objects and atmosphere separately including theory experiment instrument and application In addition it introduces how polarization remote sensing works in advanced research programs as it can be used in aviation astronomy disaster risk prevention and navigation fields This book serves as a fundamental and comprehensive reference for researchers and students Descriptive Catalogue of the Embryological Models Arthur Milnes Marshall,1891 Atlas of Antarctica Ute Christina Herzfeld,2004 The CD ROM contains all the atlas maps and elevation models Course of Study for the Common Schools of Illinois Illinois Education Association.
