From Inner Sources N. Gregory Hamilton, 1992 Clinical theory is becoming a way of understanding oneself and one s patients rather than a tool for determining the best technical intervention as a thing in itself This change has brought increased recognition that different therapists need different theories with their patients and that even the same clinician may need different theories at different times As a result there is a new tolerance for and even an encompassing of

divergent viewpoints Today is an age of multiple models in psychotherapy From Inner Sources New Directions in Object Relations Psychotherapy includes chapters by the most prominent contributors to this change Kernberg Adler Ogden McDougall Pine and the Scharffs These clinicians among others included originally laid the base for object relations theories in the United States Their ideas about how individuals grow and change by internalizing and externalizing experience were derived from psychoanalytic investigations into severe mental disorders As these concepts have been more widely understood and accepted they have been applied to a wider range of disorders and problems Each chapter reflects in a different way how object relations psychotherapies are moving in new directions while maintaining their connection with the original inner source The central concepts such as empathy containment object identification splitting counter transference and the examination of internal object relations newness are emphasized in each of the contributions The chapters are clinically relevant and contain significant case material Although it is not an introduction to object relations theory this book is understandable to beginning therapists while containing sufficient depth and controversial discussion for advanced clinicians The focus of this book is on individual psychotherapy with emphasis on examination of the therapist s intersubjective experience in relation to the patient as opposed to focusing on the patient s experience alone

Dorpat, 1985

Psychoanalytic Theory and the Rorschach Paul M. Lerner, 1991 **Difficult Psychiatric Consultations** Sergio V. Delgado, Jeffrey R. Strawn, 2013-11-19 The fields of psychiatry and child psychiatry are encumbered by numerous and complex relational medicolegal and ethical dilemmas This practical and clinically relevant book attempts to bring clarity to complex clinical presentations through the integration of psychodynamic family systems medicolegal and ethical perspectives It recognizes that the intimate and often difficult work with such complex cases requires consultation with multidimensional experts to address psychodynamic family ethical and therapeutic issues In the process the author aims to foster the comfort and skill in dealing with these cases that is essential to the personal and

professional growth of the psychiatrist It is further anticipated that the book will assist in developing best practice standards for assessment and intervention in cases of this nature *Affect, Object, and Character Structure* Morton Kissen,1995 The incapacity to mourn and ultimately let go of pathological introjects and identifications is linked to an unconscious need to protect early objects against unfavorable perceptions and associated affective reactions A failure to attain maturational momentum from a more adequate process of mourning object relational integration and psychic healing results from these pathological protectiveness reactions Common forms of character pathology and resistances can be viewed as resulting from an excessive need to protect early pathological objects The extreme stuckness and repetitively unsatisfying behavior patterns of many characterologically disturbed patients can be alleviated via an intensive form of resistance analysis focusing upon the reluctance to experience positive affects and the inner object relational paradigms associated with that reluctance
