with frequencies between 100 GHz and 30 THz has developed into an important tool of science and technology with
numerous applications in materials characterization imaging sensor technologies and telecommunications Recent progress in
THz generation has provided ultrashort THz pulses with electric field amplitudes of up to several megavolts cm This
development opens the new research field of nonlinear THz spectroscopy in which strong light matter interactions are
exploited to induce quantum excitations and or charge transport and follow their nonequilibrium dynamics in time resolved
experiments This book introduces methods of THz generation and nonlinear THz spectroscopy in a tutorial way discusses the
relevant theoretical concepts and presents prototypical experimental and theoretical results in condensed matter physics The

potential of nonlinear THz spectroscopy is illustrated by recent research including an overview of the relevant literature
