[The Dynamics of Electrons in Linear Plasma Devices and Its Impact on Plasma Surface Interaction](#) Michael Hubeny, 2019-02-15 Turbulence in plasma surface interaction holds crucial uncertainties for its impact on material erosion in the operation of fusion reactors In this thesis the design development and operation of a Thomson scattering diagnostic and its novel implementation with fast visual imaging created a versatile tool to investigate intermittently occurring plasma oscillations Specifically ballistic transport events in the plasma edge constituting turbulent transport have been targeted in this thesis With the help of a custom photon counting algorithm the conditional averaging technique was applied on Thomson scattering for the first time to allow spatial and pseudo time resolved measurements Since plasma turbulence and the emerging transport phenomena are comparable in most magnetized devices the diagnostic development and the results from the linear plasma device PSI 2 are useful for an implementation of similar techniques in larger fusion experiments Furthermore the obtained results indicate a strong enhancement of erosion with turbulent transport and thus underline the importance of dedicated experiments investigating plasma turbulence in the framework of erosion in future fusion reactors

**Novel Colloidal Forming of Ceramics** Yong Huang, Jinlong Yang, 2011-04-05 Novel Colloidal Forming of Ceramics discusses several new near net shape techniques for fabricating highly reliable high performance ceramic parts These techniques combine injection molding and the colloidal forming process The book not only introduces the basic theoretical development and applications of the colloidal injection molding of ceramics but also covers tape casting technology the reliability of the product and the colloidal injection molding of Si<sub>3</sub>N<sub>4</sub> and SiC as well as the low toxicity system The book is intended for
