

Random Polynomials: A function of the form

$$P_n(x) = \sum_{j=0}^n a_j x^j,$$

with the a_j being real valued random variables is called a random polynomial.

In the case of real Gaussian coefficients, one of the essential works is due to Kac [1943], where he introduces an explicit integral formula to determine the expected number of the real zeros of P_n . He showed that if $a_j \sim \mathcal{N}(0, 1)$ (all the coefficients are i.i.d. random variables with standard normal distribution), then for large enough $n \in \mathbb{N}$,

$$\mathbb{E}[N_n(\mathbb{R})] \sim \frac{2}{\pi} \ln(n).$$

Note that $N_n(\mathbb{R})$ denotes the number of **REAL** zeros of P_n .

Topics In Random Polynomials:

Topics in Random Polynomials K Farahmand,1998-08-15 Topics in Random Polynomials presents a rigorous and comprehensive treatment of the mathematical behavior of different types of random polynomials These polynomials the subject of extensive recent research have many applications in physics economics and statistics The main results are presented in such a fashion that they can be understood and used by readers whose knowledge of probability incorporates little more than basic probability theory and stochastic processes Topics in Random Polynomials Kambiz Farahmand,1998 Random Polynomials A. T. Bharucha-Reid,M. Sambandham,2014-05-10 Probability and Mathematical Statistics A Series of Monographs and Textbooks Random Polynomials focuses on a comprehensive treatment of random algebraic orthogonal and trigonometric polynomials The publication first offers information on the basic definitions and properties of random algebraic polynomials and random matrices Discussions focus on Newton s formula for random algebraic polynomials random characteristic polynomials measurability of the zeros of a random algebraic polynomial and random power series and random algebraic polynomials The text then elaborates on the number and expected number of real zeros of random algebraic polynomials number and expected number of real zeros of other random polynomials and variance of the number of real zeros of random algebraic polynomials Topics include the expected number of real zeros of random orthogonal polynomials and the number and expected number of real zeros of trigonometric polynomials The book takes a look at convergence and limit theorems for random polynomials and distribution of the zeros of random algebraic polynomials including limit theorems for random algebraic polynomials and random companion matrices and distribution of the zeros of random algebraic polynomials The publication is a dependable reference for probabilists statisticians physicists engineers and economists *Topics on Random Polynomials and Random Polytopes* Hauke Hendrik Seidel,2022

Randomization, Relaxation, and Complexity in Polynomial Equation Solving Leonid Gurvits,2011 This volume corresponds to the Banff International Research Station Workshop on Randomization Relaxation and Complexity held from February 28 March 5 2010 It contains a sample of advanced algorithmic techniques underpinning the solution of systems of polynomial equations The papers are written by leading experts in algorithmic algebraic geometry and examine core topics

Interpolation Theory, Systems Theory and Related Topics Daniel Alpay,Israel Gohberg,Victor Vinnikov,2012-12-06 This volume is dedicated to Harry Dym a leading expert in operator theory on the occasion of his sixtieth birthday The book

opens with an autobiographical sketch a list of publications and a personal account of I Gohberg on his collaboration with Harry Dym The mathematical papers cover Krein space operator theory Schur analysis and interpolation several complex variables and Riemann surfaces matrix theory system theory and differential equations and mathematical physics The book is of interest to a wide audience of pure and applied mathematicians electrical engineers and theoretical physicists On Random Polynomials Spanned by OPUC Hanan Aljbran,2020 We consider the behavior of zeros of random polynomials of the form
$$P_n(z) = \sum_{m=0}^n \varphi_m(z) \varphi_{m-1}(z) \cdots \varphi_n(z)$$
 as $n \rightarrow \infty$ where m is a non negative integer most of the work deal with the case $m=0, \dots, n \rightarrow \infty$ is a sequence of i.i.d Gaussian random variables and $\varphi_n(z)$ is a sequence of orthonormal polynomials on the unit circle \mathbb{T} for some Borel measure μ on \mathbb{T} with infinitely many points in its support Most of the work is done by manipulating the density function for the expected number of zeros of a random polynomial which we call the intensity function

Mathematical Constants Steven R. Finch,2003-08-18 Steven Finch provides 136 essays each devoted to a mathematical constant or a class of constants from the well known to the highly exotic This book is helpful both to readers seeking information about a specific constant and to readers who desire a panoramic view of all constants coming from a particular field for example combinatorial enumeration or geometric optimization Unsolved problems appear virtually everywhere as well This work represents an outstanding scholarly attempt to bring together all significant mathematical constants in one place **Proceedings of A. Razmadze Mathematical Institute** ,2001 **International Journal of Applied Mathematics** ,2005 Counting Polynomial Matrices over Finite Fields Julia Lieb,2017-09-15 This book is dealing with three mathematical areas namely polynomial matrices over finite fields linear systems and coding theory Primeness properties of polynomial matrices provide criteria for the reachability and observability of interconnected linear systems Since time discrete linear systems over finite fields and convolutional codes are basically the same objects these results could be transferred to criteria for non catastrophicity of convolutional codes In particular formulas for the number of pairwise coprime polynomials and for the number of mutually left coprime polynomial matrices are calculated This leads to the probability that a parallel connected linear system is reachable and that a parallel connected convolutional code is non catastrophic Moreover other networks of linear systems and convolutional codes are considered *Nonlinearity* ,2006-04

Compositio Mathematica ,2008 From Topology to Computation: Proceedings of the Smalefest Morris W. Hirsch,Jerrold E. Marsden,Michael Shub,2012-12-06 An extraordinary mathematical conference was held 5-9 August 1990 at the University of California at Berkeley From Topology to Computation Unity and Diversity in the Mathematical Sciences An International Research Conference in Honor of Stephen Smale's 60th Birthday The topics of the conference were some of the fields in which Smale has worked Differential Topology Mathematical Economics Dynamical Systems Theory of Computation Nonlinear Functional Analysis Physical and Biological Applications This book comprises the proceedings of that conference

The goal of the conference was to gather in a single meeting mathematicians working in the many fields to which Smale has made lasting contributions. The theme Unity and Diversity is enlarged upon in the section entitled Research Themes and Conference Schedule. The organizers hoped that illuminating connections between seemingly separate mathematical subjects would emerge from the conference. Since such connections are not easily made in formal mathematical papers, the conference included discussions after each of the historical reviews of Smale's work in different fields. In addition, there was a final panel discussion at the end of the conference.

Recent Progress in Inequalities G.V. Milovanovic, 2013-03-14. This volume is dedicated to the late Professor Dragoslav S. Mitrinovic (1908-1995), one of the most accomplished masters in the domain of inequalities. Inequalities are to be found everywhere and play an important and significant role in almost all subjects of mathematics as well as in other areas of sciences. Professor Mitrinovic used to say: "There are no equalities even in human life; inequalities are always encountered." This volume provides an extensive survey of the most current topics in almost all subjects in the field of inequalities, written by 85 outstanding scientists from twenty countries. Some of the papers were presented at the International Memorial Conference dedicated to Professor D. S. Mitrinovic, which was held at the University of Nis, June 20-22, 1996. Audience: This book will be of great interest to researchers in real, complex, and functional analysis, special functions, approximation theory, numerical analysis, and computation, and other fields, as well as to graduate students requiring the most up-to-date results.

European Congress of Mathematics Ari Laptev, 2005. The European Congress of Mathematics, held every four years, has established itself as a major international mathematical event. Following those in Paris (1992), Budapest (1996), and Barcelona (2000), the Fourth European Congress of Mathematics took place in Stockholm, Sweden, June 27 to July 2, 2004, with 913 participants from 65 countries. Apart from seven plenary and thirty-three invited lectures, there were six Science Lectures covering the most relevant aspects of mathematics in science and technology. Moreover, twelve projects of the EU Research Training Networks in Mathematics and Information Sciences, as well as Programmes from the European Science Foundation in Physical and Engineering Sciences, were presented. Ten EMS Prizes were awarded to young European mathematicians who have made a particular contribution to the progress of mathematics. Five of the prizewinners were independently chosen by the 4ECM Scientific Committee as plenary or invited speakers. The other five prizewinners gave their lectures in parallel sessions. Most of these contributions are now collected in this volume, providing a permanent record of so much that is best in mathematics today.
