Understanding GPS/GNSS: Principles and Applications, Third Edition Elliott D. Kaplan, Christopher Hegarty, 2017-05-31

This thoroughly updated third edition of an Artech House bestseller brings together a team of leading experts providing a current and comprehensive treatment of global navigation satellite systems GNSS that readers won't find in other resources. Packed with brand new material this third edition includes new chapters on the system engineering details of GPS European Galileo system Chinese Beidou systems GLONASS and regional systems such as Quasi Zenith Satellite System QZSS and Navigation with Indian Constellation NavIC. Readers also find new coverage of GNSS receivers, disruptions, errors, stand alone GNSS performance, differential and precise point positioning. This single source reference provides both a quick overview of GNSS essentials and an in depth treatment of advanced topics and explores all the latest advances in technology, applications and systems. Readers are guided in the development of new applications and on how to evaluate their performance. It explains all the differential GNSS services available to help decide which is best for a particular application. The book discusses the integration of GNSS with other sensors and network assistance. Readers learn how to build GNSS receivers and integrate them into navigational and communications equipment. Moreover, this unique volume helps determine how technology is affecting the marketplace and where best to invest in a company's resources.

Component & Connector Architecture Description Infrastructure for Multi-Platform Modeling Andreas

Wortmann, 2016-11-08. Software engineering for complex systems requires abstraction, multi domain expertise, separation of concerns and reuse. Domain experts rarely are software engineers and should formulate solutions using their domain's vocabulary instead of general purpose programming languages (GPLs). Successful integration of domain specific languages (DSLs) into a software system requires a separation of concerns between domain issues and integration issues while retaining a loose enough coupling to support DSL reuse in different contexts. Component based software engineering (CBSE) increases reuse and separation of concerns by encapsulating functionalities in components. Components are GPL artifacts which raises accidental complexities. Model driven engineering (MDE) abstracts from GPLs by lifting models to primary development artifacts. Models can be abstract and better comprehensible by using domain vocabulary instead of a GPL. They can be platform independent and translated into GPLs for different target platforms. Component connector (C/C) architecture description languages (ADLs) combine CBSE and MDE to compose of architectures from component models. We present concepts for engineering software systems with exchangeable component behavior languages. The concepts are realized in a

software architecture modeling infrastructure that comprises modeling languages to develop applications based on C C software architectures with exchangeable component behavior DSLs It supports transformations from platform independent to platform specific software architectures and compositional code generation With this it enables domain experts to re use the most appropriate component behavior DSL and facilitates composition of domain solutions through encapsulation in components
