Social Order in Multiagent Systems Rosaria Conte, Chris Dellarocas, 2012-12-06 Social Order in Multiagent Systems provides an overview of current approaches problems and considerations related to the study of norms and institutions in the context of multiagent systems The contributions in this volume share the assumption that norms and other social institutions are of vital importance for the development of multiagent systems and agent mediated interaction Both formal and computational models of norms and normative systems are presented including formal analysis of normative concepts and foundational models of norms agent and systems architectures for implementing norms and implemented systems Social Order in Multiagent Systems is an excellent reference for researchers in artificial intelligence and computer science and can be used as text for advanced level courses in multiagent systems Multiagent System Technologies Gabriela Lindemann-v. Trzebiatowski, Jörg Denzinger, Ingo J. Timm, Rainer Unland, 2004-11-16 After the huge success of the first German Conference on Multiagent System Technologies MATES last year in Erfurt the German Special Interest Group on Distributed Artificial Intelligence together with the steering committee of MATES proudly organized and conducted this international conference for the second time The goal of the MATES conference is to constitute a high quality platform for the presentation and discussion of new research results and system developments It provides an interdisciplinary forum for researchers users and developers to present and discuss the latest advances in research work as well as prototyped or old systems of intelligent agents The conference covers the complete range from theory to application of agent and multiagent technologies MATES 2004 was conducted as an integral part of the 5th International Conference Net Object Days 2004 along with the 8th International Workshop on Cooperative Information Agents CIA 2004 Autumn meeting of FIPA Foundation for Intelligent Physical Agents Prototype and Product Exhibition of Agent Related Platforms Frameworks Systems Applications and Tools As such all these events together may have formed the biggest agent related event of this year in Europe and one of the biggest worldwide The call for papers attracted about 60 submissions from all over the world After a careful reviewing process the international program committee accepted 22 high quality papers of particular relevance and quality The selected contributions cover a wide range of exciting topics in particular agent analysis and security agent negotiation and control agents and software engineering's relation and agents and agent policies and testing Exciting highlights of the conference were the invited talks by Jim Odell on Agent UML 2.0 Too Radical or Not Radical Enough and Cristiano Castelfranchi on Emergence and Cognition Towards a Synthetic Paradigm in AI and Cognitive Science Moreover several agent related tutorials were conducted Multiagent System Technologies Gabriela Lindemann, 2004-09-23 This book constitutes the refereed proceedings of the Second German Conference on Multiagent Systems Technologies MATES 2004 held in Erfurt Germany in September 2004 The 22 revised full papers presented together with 2 invited papers were carefully reviewed and selected from 60 submissions The papers are organized in topical sections on learning and social agents analysis and security

computing is to become anything more than a niche technology practiced by the few then the base of people who can successfully apply the approach needs to be broadened dramatically A major step in this broadening endeavor is the development of methodologies for agent oriented software engineering accessible to and attractive for professional software engineers in their daily work Against this background this book presents one of the first coherent attempts to develop such a methodology for a broad class of agent based systems The author provides a clear introduction to the key issues in the field of agent oriented software engineering

Readings in Agents Michael N. Huhns, Munindar P. Singh, 1998 This book collects the most significant literature on agents in an attempt to forge a broad foundation for the field Includes papers from the perspectives of AI databases distributed computing and programming languages The book will be of interest to programmers and developers especially in Internet areas
