in a small open economy The preferred model is a dynamic model of incomplete competition which is evaluated against alternatives as diverse as the Phillips curve Nickell Layard wage curves the New Keynesian Phillips curve and monetary inflation models on data from the Euro area the UK and Norway The wage price core model is built into a small econometric model for Norway to analyse the transmission mechanism and to evaluate monetary policy rules The final chapter explores the main sources of forecast failure likely to occur in a practical modelling situation using the large scale model RIMINI and the inflation models of earlier chapters as case studies

A History of Econometrics R.J. Epstein, 2014-06-28 This comparative historical study of econometrics focuses on the development of econometric methods and their application to macroeconomics The analysis covers the origins of modern econometrics in the USA and Europe during the 1920 s and 30 s the rise of structural estimation in the 1940 s and 50 s as the dominant research paradigm and the crisis of the large macroeconomic models in the 1970 s and 80 s The completely original feature of this work is the use of previously unknown manuscript material from the archives of the Cowles Commission and other collections The history so constructed shows that recent debates over methodology are incomplete without understanding the many deep criticisms that were first raised by the earliest researchers in the field

Merits of Life Insurance Elma Satrovic, 2018-09-10 Document from the year 2018 in the subject Economics Finance grade 14 University of Sarajevo language English abstract In this book linear panel data estimators are employed to investigate the relationship between life insurance and economic growth This study contributes to previous studies by using Maximum likelihood estimation of dynamic panel that was not used in previous studies concerning the aforementioned relationship by controlling for number of factors thought to influence economic growth by referring to a much larger number of countries and by exploring the relationship between life insurance and economic growth while controlling for the degree of financial sector development as well as for the regional and income disparities Sixteen models that explore the impact of control variables integrated singly in the equations and an integrated model that controls for the impact of all key variables are estimated Empirical results reveal a significant positive relationship between life insurance and economic growth in models Education is reported to have a positive impact on economic growth Government spending is found to have a negative impact on economic growth while model reports that inflation has a negative impact on economic growth Trade openness is not reported to have a significant impact on economic growth in

Cointegration Analysis in a German Monetary System Kirstin Hubrich,2001 With the decision of the European Central Bank to assign a prominent role to a monetary aggregate in its policy strategy it is essential to further understand the policy of monetary targeting of the German Bundesbank and the conditions under which it succeeded The focus of the empirical analysis is on long run monetary relationships A small sample simulation analysis compares the size and power properties of a broad range of systems cointegration tests The results determine the methods chosen for the cointegration analysis of a small system of macroeconomic variables for Germany Three stable long run economic relationships are found which are of major interest for the conduct and transmission of monetary policy in Germany With the stability of the long run money demand relation one precondition for the monetary targeting strategy of the Bundesbank is fulfilled The analysis accounts for the structural break of German reunification and examines the robustness of the empirical results
