Genesis and Geomorphology is a comprehensive and accessible textbook on all aspects of soils. The book's introductory chapters on soil morphology, physics, mineralogy, and organisms prepare the reader for the more advanced and thorough treatment that follows. Theory and processes of soil genesis and geomorphology form the backbone of the book rather than the emphasis on soil classification that permeates other less imaginative soils textbooks. This refreshingly readable text takes a truly global perspective with many examples from around the world sprinkled throughout. Replete with hundreds of high quality figures and a large glossary, this book will be invaluable for anyone studying soils, landforms, and landscape change. Soils, Genesis and Geomorphology is an ideal textbook for mid to upper level undergraduate and graduate level courses in soils, pedology, and geomorphology. It will also be an invaluable reference text for researchers.

This book is a compilation of latest work in the field of urban soil management. It explores the global status of urban soils and puts forwards methods for sustainable utilization of urban soils and green spaces. Urban soil study is a new frontier of soil science. Urban soils research is challenging due to complexity of classification, spatial, temporal variability, exposure to pollution, and the predominant effect of the anthropogenic factor on soil formation. Management of urban soils and green spaces is an important aspect for developing sustainable spaces. This is a
