Text Retrieval and Document Databases John H. Ashford, Peter Willett, 1988 *Text Retrieval and Document Databases*, 1989 Multimedia Database in Perspective Peter M.G. Apers, Henk M. Blanken, Maurice A.W. Houtsma, 2012-12-06 During the last decade multimedia has emerged as a major research and development area. Pushed by advanced technology like huge capacity storage devices, fast networks and powerful work stations, new applications have arisen. Many definitions of multimedia systems exist, one of them being computer systems that support interactive use of at least one of the following information sources: graphics, image, voice, sound, and video. These systems have caused a boom in the world of entertainment, but also in other business areas. Great opportunities for novel products and services are available. The size of multimedia data is often huge, and the storage of huge amounts of data is a task normally allocated to database management systems. Although some modern database management systems offer facilities to support development of multimedia applications, many problems related to multimedia support are still not well understood. This book reports on research efforts to solve some of these problems. An introductory knowledge of databases and also of operating systems and network technology is assumed. The book is very suitable as material for courses at senior or graduate level, but also for upgrading the skills of computer scientists working on database management systems, multimedia systems, or applications. The book consists of four parts. Part I is called Requirements for a Multimedia Database and comprises chapters one to three. Chapter one presents an outline of the book.

Research And Practical Issues In Databases - Proceedings Of The 3rd Australian Database Conference B Srinivasan, John Zeleznikow, 1992-01-08 This volume of proceedings contains original papers of good technical quality which present recent developments in databases and knowledge based systems and their applications to practical problems. Topics covered include databases and temporal databases, object oriented modelling and object oriented databases, deductive databases, distributed database and information systems, database design issues, and intelligent databases. The papers reflect the importance of databases and the work being done on them.

Database and Expert Systems Applications Trevor Bench-Capon, Giovanni Soda, Min A Tjoa, 1999-08-20 The Database and Expert Systems Applications DEXA conferences bring together researchers and practitioners from all over the world to exchange ideas, experiences, and opinions in a friendly and stimulating environment. The papers are at once a record of what has been achieved and the first steps towards shaping the future of information systems. DEXA covers a broad field, and all aspects of database, knowledge base, and related technologies, and their applications are represented. Once again, there were a good number of submissions: 241 papers were submitted, and of these, the programme committee selected 103 to be presented. DEXA 99 took place in Florence and was the tenth conference in the series, following events in Vienna, Berlin, Valencia, Prague, Athens, London, Zurich, Toulouse, and Vienna. The decade has seen many developments in the areas covered by DEXA, developments in which DEXA has played its part. I would like to express thanks to all the institutions which have actively supported and made possible this

conference namely University of Florence Italy IDG CNR Italy FAW University of Linz Austria Austrian Computer Society DEXA Association In addition we must thank all the people who have contributed their time and effort to make the conference possible Special thanks go to Maria Schweikert Technical University of Vienna M Neubauer and G Wagner FAW University of Linz We must also thank all the members of the programme committee whose careful reviews are important to the quality of the conference
