Using Modern Mathematics:

Modern Mathematics Dirk De Bock, 2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century It attracted the attention of local and international politicians of teachers and of parents and influenced the teaching and learning of mathematics at all levels kindergarten to college graduate in many nations After garnering much initial support it began to attract criticism But as Bill Jacob and the late Jerry Becker show in Chapter 17 some of the effects became entrenched This volume edited by Professor Dirk De Bock of Belgium provides an outstanding overview of the New Math modern mathematics movement Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who since the 1930s had published under the name of a fictitious Nicolas Bourbaki In the United States there emerged during the 1950s various attempts to improve U S mathematics curricula and teaching especially in secondary schools and colleges This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik the first satellite Undoubtedly this is a landmark publication in education The foreword was written by Professor Bob Moon one of a few other scholars to have written on the New Math from an international perspective The final epilogue chapter by Professor Geert Vanpaemel a historian draws together the overall thrust of the volume and makes links with the general history of curriculum development especially in science education including recent globalization trends

A Student's Guide to the Study, Practice, and Tools of Modern Mathematics Donald Bindner, Martin Erickson, 2010-11-29 A Student's Guide to the Study Practice and Tools of Modern Mathematics provides an accessible introduction to the world of mathematics It offers tips on how to study and write mathematics as well as how to use various mathematical tools from LaTeX and Beamer to Mathematica and MapleTM to MATLAB and R Along with a color insert the text includes exercises and challenges to stimulate creativity and improve problem solving abilities The first section of the book covers issues pertaining to studying mathematics The authors explain how to write mathematical proofs and papers how to perform mathematical research and how to give mathematical presentations The second section focuses on the use of mathematical tools for mathematical typesetting generating data finding patterns and much more The text describes how to compose a LaTeX file give a presentation using Beamer create mathematical diagrams use computer algebra systems and display ideas on a web page The authors cover both popular commercial software programs and free and open source software such as Linux and R Showing how to use technology to understand mathematics this guide supports students on their way to becoming professional mathematicians For beginning mathematics students it helps them study for tests and write papers As time

progresses the book aids them in performing advanced activities such as computer programming typesetting and research
