**Water Quality Management in the Americas** Asit K. Biswas,Cecilia Tortajada,Benedito Braga,Diego J. Rodriguez,2006-02-09 Considerable attention has been given during the past few years to the water crisis that many regions of the world may face in the coming decades While the magnitude and the extent of the global water scarcity problems of the future should not be underestimated a serious analysis of the current trends indicate that the main water crisis in the coming years is most likely to stem primarily from water quality deterioration and lack of investment funds rather than from physical water scarcities per se as is widely expected at present In spite of the seriousness of continuing water quality deterioration in most countries of the world water quality management continues to be a somewhat neglected issue in the international water community Even the magnitudes and extents of the water quality problems are not reliably known in many developed countries and in nearly all developing ones Accordingly in order to assess the current situation in water quality management in the Americas and to discuss the alternatives available to improve the existing and future water quality conditions in a cost effective and timely manner the Third World Centre for Water Management in Mexico the National Water Agency in Brazil Agencia Nacional deguas and the Inter American Development Bank organised a workshop on Water Quality Management for
