Usercentred Design Of Systems:

User-centred Design of Systems Jan Noyes,1999 System design has conventionally been the province of engineers and the approaches taken to the design of systems have conventionally led to formal specification of the system The past decade or two has seen the rise of another approach that of human computer interaction HCI Given the number of incidents and accidents which are attributed to human error it is sensible to develop an approach to system design which views humans as an essential element in the system Thus an important aspect of designing systems is the study of the interaction between humans and the technology that they use In terms of bringing computers and computing to a wide audience the 1980s were the boom years The first personal computer PC was launched onto the market in February 1978 and since then PCs have become a common place feature of our homes offices schools retail outlets hospitals banks etc Within Western society today there are very few organisations that have not been infiltrated by computer technology and few individuals who have not had experience of computers However the increase in use of computers has not been matched with a corresponding spread of training of users much of the human computer interaction research has sought to design systems which do not require special training i e which people can simply walk up to and use Not surprisingly this has resulted in a number of difficulties some of which have yet to be satisfactorily resolved

User-Centred Design of Systems Jan Noyes,Chris Baber,2011-10-02 Written by psychologists this book focuses on the design of computer systems from the perspective of the user The authors place human beings firmly at the centre of system design and so assess their cognitive and physical attributes as well as their social needs The model used specifically takes into consideration the way in which computer technology needs to be designed in order to take account of all these human factors The text comprises a careful mix of theory and applications and is spiced throughout with practical examples of do s and don ts in designing systems

Human Factors in Analysis and Design of Information Systems
Anthony Finkelstein, Michael J. Tauber, Roland Traunmüller, 1990 Information systems may be regarded as an interaction of people and machines In the past however human factors took second place Nowadays the need to provide i a functionality that meets the user s needs and ii an ergonomic human machine interface which takes the way people would like to solve their tasks into consideration are both recognised as primary concerns by the designers of information systems The two major themes of this book are as follows As new methods and rigorous techniques come into use the proportion of information systems development effort devoted to analysis and design is set to increase and the study of human factors also to increase in importance Methods representation schemes tools and environments cannot be applied without a systematic understanding of their use by analysts and designers in development teams The book presents research results in this area Much study in software development has concentrated on a human factors perspective of the end user However this work has to be placed in the overall context of systematic analysis and design of information systems The book presents some new developments
