Using Microcomputers:

Using Microcomputers Blaine A. Brownell, 1985-04 Brownell's book is an introductory text on microcomputers for academics. It contains specific examples of computer applications useful to social scientists. The examples are of bibliographies, references, research notes, census data, survey data, grant and contract accounting, instructional possibilities, and the preparation of book-length manuscripts. The chapters on hardware contain brief descriptions of the most popular machines with specifications and observations on their varying usefulness. The software discussions consist of basic descriptions of programming, what they can do, how easy they are to learn, and their principal advantages and disadvantages.

Personal Computers. **Using Microcomputers** H. L. Capron, Ralph E. Duffy, 1989. **Using Microcomputers in School Administration** Eugene T. Connors, Thomas C. Valesky, 1986. This fastback outlines the steps to take in computerizing school administration. After an introduction that lists the potential benefits of microcomputers in administrative offices, the booklet begins by delineating a three-step process for establishing an administrative computer system: 1. creating a district-level committee of administrators, counselors, librarians, special education teachers, at least one computer expert, and other end users to identify school administrative functions best suited for computerization; 2. to locate appropriate computer software to accomplish the administrative tasks that have been identified; and 3. to select the hardware that will run the software that has been chosen. The second chapter, selecting software, discusses stand-alone versus integrated programs, disk operating systems, word processing, database management, spreadsheets, accounting, data analysis, and graphics, and special applications. The third chapter, selecting hardware, discusses 8-bit machines, 16-bit machines, computer power, peripheral devices, and vendors. The final chapter addresses the problem of getting started and discusses consultants, establishing priorities, staff training, and the logistics of transferring to a computerized system. TE. **Using Microcomputers in Training Institutions** United Nations Publications, 2003-01. This guide on proposed microcomputer systems and applications for training institutions in developing countries discusses the development of microcomputer systems. It recommends hardware and software configurations for typical training applications and the use of microcomputers for greater personal and institutional efficiency. The study also provides specific examples of applications: visual aids produced with desktop publishing and graphics software, video imaging systems, expert systems in training, databases of training materials, electronic links between training institutions in developing countries, and using shared databanks. **An Introduction to Control and Measurement with Microcomputers** Robert Louis Dalglish, 1987-11-19.
