**The XML Handbook** Charles F. Goldfarb, Paul Prescod, 2001 This book provides a comprehensive presentation of the most advanced research results and technological developments enabling understanding, qualifying and mitigating the soft errors effect in advanced electronics including the fundamental physical mechanisms of radiation induced soft errors, the various steps that lead to a system failure, the modelling and simulation of soft error at various levels including physical, electrical, netlist, event driven RTL and system level modelling and simulation, hardware fault injection, accelerated radiation testing and natural environment testing, soft error oriented test structures, process level, device level, cell level, circuit level, architectural level, software level and system level soft error mitigation techniques. The book contains a comprehensive presentation of most recent advances on understanding, qualifying and mitigating the soft error effect in advanced electronic systems presented by academia and industry experts in reliability, fault tolerance, EDA, processor SoC and system design and in particular experts from industries that have faced the soft error impact in terms of product reliability and related business issues and were in the forefront of the countermeasures taken by these companies at multiple levels in order to mitigate the soft error effects at a cost acceptable for commercial products. In a fast moving field where the impact on ground level electronics is very recent and its severity is steadily increasing at each new process node impacting one after another various industry sectors, as an example the Automotive Electronics Council comes to publish qualification requirements on soft errors, research and technology developments and industrial practices have evolved very fast, outdating the most recent books edited at 2004.
