Kaba,David Wastell,2006-08-18 1 Jean Claude Derniame Software process technology is an emerging and strategic area that has already reached a reasonable degree of maturity delivering products and significant industrial experiences This technology aims at supporting the software production process by providing the means to model analyse improve measure and whenever it is reasonable and convenient to automate software production activities In recent years this technology has proved to be effective in the support of many business activities not directly related to software production but relying heavily on the concept of process i e all the applications traditionally associated with workflow management This book concentrates on the core technology of software processes its principles and concepts as well as the technical aspect of software process support The contributions to this book are the collective work of the Promoter 2 European Working Group This grouping of 13 academic and 3 industrial partners is the successor of Promoter a working group responsible for creating a European software process community Promoter 2 aims at exploiting this emerging community to collectively develop remaining open issues to coordinate activities and to assist in the dissemination of results The title Software Process Modelling and Technology Fink94 was produced during Promoter 1 Being project based it presented the main findings and proposals of the different projects then being undertaken by the partners **Process Modelling** Bernd Scholz-Reiter,Hans-Dietrich Stahlmann,Arnim Nethe,2012-12-06 A process model is very often used for system analysis design and management in various application areas Using a process model has the advantage that it has only to be as precise as necessary within the parameters of the individual field of application whereas the precision externally is less important This makes process modeling easier and open for structuring The contributions deal with different approaches to process modelling especially in the areas of business process modelling logistics and production processes and water systems *Information Modelling and Knowledge Bases XVI* Yasushi Kiyoki,Y. Achieving Quality in Software S. Bologna, G. Bucci, 2013-11-11 Software quality is a generalised statement difficult to agree or disagree with until a precise definition of the concept of Software Quality is reached in terms of measurable quantities Unfortunately for the software technology the basic question of what to measure how to measure when to measure how to deal with the data obtained are still unanswered and are also closely dependant on the field of application In the past twenty years or more there have been a number of conferences and debates focusing on the concept of Software Quality which produced no real industrial impact Recently however the implementation of a few generic standards ISO 9000 IEEE etc has produced and improved application of good practice principles at the industrial level As a graduate in PhYSiCS I still believe it is a long way before the concept of Software Quality can be defined exactly and measured if ever This is way I think the AQuIS series of conferences is important its object begin to provide a platform for the transfer of technology and know how between Academic Industrial and Research Institutions in the field of Software Quality Their objects are to provide a forum for the introduction and discussion of new research breakthroughs in Software Quality to provide professional Software Quality engineers with the necessary exposure to the results of current research to expose the research community to the problems of practical application of new results
