Spacecraft Power Systems Mukund R. Patel, 2004-11-29 The power systems of space vehicles have undergone significant development during the previous decade and will continue to do so in the immediate future Until now except for the scattered results of conferences and a few publications with sketchy coverage no single volume has covered the entire spectrum of the subject *Spacecraft Power System Technologies* Qi Chen, Zhigang Liu, Xiaofeng Zhang, Liying Zhu, 2020-08-14 This book provides an introduction to the main design principles methods procedures and development trends in spacecraft power systems It is divided into nine chapters the first of which covers the classification and main components of primary power system design and power distribution system design In turn Chapters 2 to 4 focus on the spacecraft power system design experience and review the latest typical design cases concerning spacecraft power systems in China More specifically these chapters also introduce readers to the topological structure and key technologies used in spacecraft power systems Chapters 5 to 7 address power system reliability and safety design risk analysis and control and in orbit management in China s spacecraft engineering projects The book s closing chapters provide essential information on new power systems and technologies such as space nuclear power micro and nano satellite power systems and space energy interconnection systems An outlook on future development trends rounds out the coverage *Spacecraft Power Technologies* D J Flood, Gerald Halpert, Anthony K Hyder, Shey Sabripour, R L Wiley, 2000-01-31 *Spacecraft Power Technologies* is the first comprehensive text devoted to the technologies critical to the development of spacecraft electrical power systems The science and engineering of solar chemical and nuclear systems are fully examined together with the constraints imposed by the space and thermal environments in which the systems must operate Details of present technology and the history that led to the current state of the art are presented at a level appropriate for the student as a textbook or the practicing engineer as a reference **Spacecraft Lithium-Ion Battery Power Systems** Thomas P. Barrera, 2022-11-18 *Spacecraft Lithium Ion Battery Power Systems* Provides Readers with a Better Understanding of the Requirements Design Test and Safety Engineering of Spacecraft Lithium ion Battery Power Systems Written by highly experienced spacecraft engineers and scientists working at the forefront of the aerospace industry *Spacecraft Lithium Ion Battery Power Systems* is one of the first books to provide a comprehensive treatment of the broad area of spacecraft lithium ion battery LIB power systems technology The work emphasizes the technical aspects across the entire lifecycle of spacecraft LIBs including the requirements design manufacturing testing and safety engineering principles needed to deploy a reliable spacecraft LIB based electrical power system A special focus on rechargeable LIB technologies as they apply to unmanned and crewed Earth orbiting satellites planetary mission spacecraft such as orbiters landers rovers and probes launch vehicle and astronaut spacesuit applications is emphasized Using a system s engineering approach the book bridges knowledge gaps that typically exist between academic and industry practitioners Key topics of discussion and learning resources include Detailed

systematic technical treatment of spacecraft LIB based electrical power systems across the entire LIB lifecycle Principles of lithium ion cell and battery design and test LIB sizing battery management systems electrical power systems safety engineering ground and launch site processing and on orbit mission operations Special topics such as requirements engineering qualification testing thermal runaway hazards dead bus events life cycle testing and prediction analyses on orbit LIB power system management and spacecraft EPS passivation strategies Comprehensive discussion of on orbit and emerging space applications of LIBs supporting various commercial civil and government spacecraft missions such as International Space Station Galileo James Webb Telescope Mars 2020 Perseverance Rover Europa Clipper Cubesats and more Overall the work provides professionals supporting all aspects of the aerospace marketplace with key knowledge and highly actionable information pertaining to LIBs and their specific applications in modern spacecraft systems Standard Electrical Power Systems for Unmanned Spacecraft American Institute of Aeronautics and Astronautics,2007 This document when followed in its entirety will yield a robust EPS design suitable for very high reliability space missions This document specifies general design practices and sets minimum verification and validation requirements for power systems of unmanned spacecraft The focus of the document is on earth orbiting satellites using traditional photovoltaic battery power but does not exclude other primary power generation and storage methods This document does not address specific launch vehicle requirements however much of the design philosophy used here is applicable to launch vehicle power systems
