adolescence ends in the twenty first year and it can go on till thirty or thirty five The age is called adolescence because the person is big enough to beget children In this age the limbs are soft and able to grow and receive strength and vigor from natural heat Aries 1962 p 21 The span of years devoted to adolescent development varies in different cultures and with different definitions The term adolescence is no longer equivalent to pubescence Adolescence is a psycho social biological stage of development that corresponds to changes in many areas which accompany the transition from childhood to adulthood The working definition of adolescence we use is the stage of life that starts with puberty and ends at the time when the person has attained a reasonable degree of independence from his parents Once in high school or its equivalent the vast majority of teenagers have already undergone the biological changes of puberty
