The Third Time Around:

The Book of Joe Joe Maddon, Tom Verducci, 2022-10-11 Lessons in baseball enlightenment from three time MLB Manager of the Year Joe Maddon No one sees baseball like Joe Maddon He sees it through his trademark glasses and irrepressible wit Raised in the shot and beer town of Hazleton PA and forged by 15 years in the minors Maddon over 19 seasons in Tampa Bay Chicago and Anaheim has become one of the most successful most colorful and most quoted managers in Major League Baseball He is a workplace culture expert having engineered two of the most stunning turnarounds in the past quarter century taking the Rays from the worst record in baseball one year to the World Series the next and leading the Cubs to their first World Series title in 108 years Like his teams Maddon defies convention He is part strategist part philosopher part sports psychologist and part motivational coach In THE BOOK OF JOE Maddon gives readers unique insights into the game including the tension between art and data the changing role of managers as front offices gain power why the honeymoon with the Cubs did not last and what it is like to manage the modern player including stars such as Shohei Ohtani Mike Trout Albert Pujols Yu Darvish and Kris Bryant But you expect even more from a manager who meditates daily admires Twain and has only one rule when it comes to a team dress code If you think you look hot wear it And Maddon delivers Built on old school values and new school methods his wisdom applies beyond the dugout His mantras about leadership mentorship team building and communication are meditations on life not just baseball Among those mantras are Do simple better Try not to suck Don't ever permit the pressure to exceed the pleasure See it with first time eyes Tell me what you think not what you've heard THE BOOK OF JOE is Maddon at his uniquely holistic best It is a memoir of a fascinating baseball journey an insider's look at a changing game and a guidebook on leadership and life [The New Ballgame](#) Russell A. Carleton, 2023 Watching a game of baseball today means witnessing phenomena that would have been novel if not completely unheard of not so long ago Starting pitchers sling 100 mile per hour heat for just four or five innings before departing third basemen often station themselves much closer to second to say nothing of the shortstop's whereabouts home runs and strikeouts dominate at bats all while the length of contest tips toward the four hour mark There's no getting around it the game looks different now And as Major League Baseball scrambles with rule changes equipment modifications labor negotiations and more fans are left grasping for the true essence of this beloved pastime among the moving pieces In The New Ballgame Russell Carleton The Shift deftly identifies and examines the many levers and inflection points that have shaped the game into what we see on the field today Through a singular blend of statistical analysis history and cognitive science readers will trace the rapid evolution of the modern game while contemplating the sport in an entirely new way Blending incisive research with affable storytelling Russell Carleton delivers a kaleidoscopic view on modern baseball in this welcome revelatory work **The long and short of mental time travel-- self-projection over time-scales large and small** James M. Broadway, Claire M. Zedelius, Jonathan W. Schooler, Simon Grondin, 2015-07-02

Researchers working in many fields of psychology and neuroscience are interested in the temporal structure of experience as well as the experience of time at scales of a few milliseconds up to a few seconds as well as days months years and beyond This Research Topic supposes that broadly speaking the field of time psychology can be organized by distinguishing between perceptual and conceptual time scales Dealing with conceptual time mental time travel also called mental simulation self projection episodic semantic memory prospection foresight allows humans and perhaps other animals to imagine and plan events and experiences in their personal futures based in large part on memories of their personal pasts as well as general knowledge Moreover contents of human language and thought are fundamentally organized by a temporal dimension enmeshed with it so thoroughly that it is usually expressible only through spatial metaphors But what might such notions have to do with experienced durations of events lasting milliseconds up to a few seconds during the so called present moment of perception action cycle time This Research Topic is organized around the general premise that by considering how mental time travel might scale down to time perception and vice versa no less progress and integrative synthesis within and across scientific domains might be facilitated Bipolar configurations of future and past orientations of the self may be repeated in parallel across conceptual and perceptual time scales subsumed by a general Janus like feedforward feedback system for goal pursuit As an example it is notable that the duality of prospection and semantic episodic memory operating at conceptual time scales has an analogue in perception action cycle time namely the interplay of anticipatory attention and working memory Authors from all areas of psychology and neuroscience are encouraged to submit articles of any format accepted by the journal Original Research Methods Hypothesis Theory Reviews etc which might speak to questions about time and temporal phenomena at long and or short time scales
