Working Memory and Language Susan E. Gathercole, Alan D. Baddeley, 2014-02-04 This book evaluates the involvement of working memory in five central aspects of language processing vocabulary acquisition speech production reading development skilled reading and comprehension The authors draw upon experimental neuropsychological and developmental evidence in a wide ranging evaluation of the contribution of two components of working memory to each aspect of language The two components are the phonological loop which is specialised for the processing and maintenance of verbal material and the general purpose processing system of the central executive A full introduction to the application of the working memory model to normal adults neuropsychological patients and children is provided in the two opening chapters Non experts within this area will find these chapters particularly useful in providing a clear statement of the current theoretical and empirical status of the working memory model Each of the following chapters examines the involvement of working memory in one specialised aspect of language processing in each case integrating the available experimental neuropsychological and developmental evidence The book will therefore be of direct relevance to researchers interested in both language processing and memory Working Memory and Language is unique in that it draws together findings from normal adults brain damaged patients and children For each of these populations working memory involvement in language processing ranging from the speech production to comprehension are evaluated Working Memory and Language provides a comprehensive analysis of just what roles working memory does play in the processing of language

Working Memory and Language in the Modular Mind John Truscott, 2022-06-16 The book explores two fundamental aspects of the human mind and their relation to one another The first is the way that information is put to use in the mind When we are doing a mental arithmetic problem for example how do we bring the relevant bits of information to mind and hold them there while carrying out the series of calculations This is working memory the subject of an enormous research literature in psychology neuroscience and a great many other disciplines Characterizing the working memory process is now a major part of efforts to understand the human mind How we characterize this process depends of course on how we characterize the human mind as a whole In particular is the mind made up of a number of distinct units each carrying out a specialized function There is considerable reason to say that it is and this modular view of the mind has become prominent in a great deal of academic work notably in cognitive neuroscience with important implications for our understanding of how working memory works But these implications have received surprisingly little consideration to this point The aim of the book is to explore this relation between working memory and modularity first in general terms and then using a specific modular view of the mind the Modular Cognition Framework The ideas are illustrated and further developed through an application to language and especially second language acquisition and use

The Effects of Working Memory and Language Learning on Auditory Brainstem Responses Amelia Ayala, 2020 In the past research around bilingualism suggested bilinguals might be at a cognitive disadvantage but recent research has suggested the opposite that bilinguals have a cognitive advantage over monolinguals One field of research assessing these differences measures auditory brainstem responses to understand how the brain is encoding sound Auditory brainstem responses to complex sounds cABRs can show us how consistently a participant responds to a particular stimulus such as da Along with measuring cABRs the present study aimed to assess differences in working memory as working memory is known to be an important factor in second language acquisition English speaking monolingual participants were divided into two groups low working memory versus high working memory and their cABRs were measured over four years as they learned Spanish The results showed that those with high working memory improved their cABRs more over time than low working memory monolinguals indicating a cognitive advantage for those with high working

memory and an ability for any monolingual to improve their neural consistency in processing sound as they are acquiring a second language

System Underlying Language Processing and Its Relationship to the Long-term Memory System Evelina Georgievna Fedorenko, 2007 This thesis examines two questions concerning the working memory system underlying language processing 1 To what extent is the working memory system underlying language processing domain specific and 2 What is the relationship between the working memory system and the long term memory system in language processing In Chapter 1 I describe ten experiments investigating the extent to which the working memory system underlying linguistic integrations is domain specific I argue that the results of these experiments demonstrate that at least some aspects of the working memory system used for linguistic integrations are not domain specific being involved in arithmetic and possibly musical processing In Chapter 2 I describe six experiments investigating the relationship between the two retrieval operations that are required when an incoming word is integrated into an evolving structure the retrieval of the lexical properties of the word from long

term memory and the retrieval of its structural dependents from working memory I demonstrate that the relative ease or difficulty of retrieving the lexical properties of an incoming word affect the difficulty of retrieving its structural dependents I therefore argue that the two retrieval operations rely on overlapping pools of resources

Exceptional Child Education Resources ,1997 The Role of Working Memory in Language Comprehension Patricia Anderson Carpenter, Marcel Adam Just, CARNEGIE-MELLON UNIV PITTSBURGH PA DEPT OF PSYCHOLOGY., United States. Office of Naval Research. Personnel and Training Research Programs, 1988 This chapter provides an account of the transient computational and storage demands that typically arise during comprehension and of the information management policies that attempt to satisfy those demands The chapter describes a number of recent studies that examine the trading relation between computation and storage in working memory during language comprehension Comprehension processes tends to minimize storage requirements by minimize the number of partial products that have to be stored The minimization is accomplished by immediately digesting as much of the information from the text as possible what we have called the immediacy of processing rather than using a wait and see strategy A second focus is on the differences among individuals in their ability to maintain information in working memory during comprehension We have that such individual differences in working memory capacity are closely related to large and stable individual differences in reading comprehension ability Keywords Working memory Reading comprehension Individual differences
