Thinking Science:

Critical Thinking, Science, and Pseudoscience Caleb W. Lack, Jacques Rousseau, 2016-03-08 This unique text for undergraduate courses teaches students to apply critical thinking skills across all academic disciplines by examining popular pseudoscientific claims through a multidisciplinary lens Rather than merely focusing on critical thinking grounded in philosophy and psychology the text incorporates the perspectives of biology physics medicine and other disciplines to reinforce different categories of rational explanation The book is also distinguished by its respectful approach to individuals whose ideas are according to the authors deeply flawed Accessible and engaging it describes what critical thinking is why it is important and how to learn and apply skills using scientific methods that promote it The text also examines why critical thinking can be difficult to engage in and explores the psychological and social reasons why people are drawn to and find credence in extraordinary claims From alien abductions and psychic phenomena to strange creatures and unsupported alternative medical treatments the text uses examples from a wide range of pseudoscience fields and brings evidence from diverse disciplines to critically examine these erroneous claims Particularly timely is the text s examination of how using the narrative of today s culture wars religion and culture impact science The authors focus on how the human brain rife with natural biases does not process information in a rational fashion and the social factors that prevent individuals from gaining an unbiased critical perspective on information Authored by a psychologist and a philosopher who have extensive experience teaching and writing on critical thinking and skeptical inquiry this work will help students to strengthen their skills in reasoning and debate become intelligent consumers of research and make well informed choices as citizens Key Features Addresses the foundations of critical thinking and how to apply it through the popular activity of examining pseudoscience Explains why humans are vulnerable to pseudoscientific claims and how critical thinking can overcome fallacies and biases Reinforces critical thinking through multidisciplinary analyses of pseudoscience Examines how religion and culture impact science Enlightens using an engaging entertaining approach Written by experienced and innovative scholar educators well known in the skeptic community Features teaching resources including an Instructor s Guide and Powepoint slides

The Thinking Machine Charles Judson Herrick,1929 This is a book about the natural history of human nature It is not a book about philosophy for philosophers It is a plain and straightforward statement for ordinary people of what another very ordinary sort of man who has considerable experience with the mechanisms of human life and how they work thinks about it all We all want to understand human nature better because it is our nature The better we understand it the more likely we are to get along with ourselves our neighbors and our surroundings in general We want to make life more worth while to get as much out of it as we can and to put as much into it as we can to make a better living and to have as much fun doing it as possible We need to know how we live what the apparatus of life is and how it works in order to make a better job of it Preface
