

DIFFERENCE THRESHOLD

A difference threshold is the lowest amount of change that an individual can detect. It is measured in terms of how many "just noticeable differences" (JNDs) exist between two stimuli.

EXAMPLE: VISION

Subtle shifts of coloring, perceivable to the naked eye, are known as visual thresholds. If two colors are close enough in hue and value, they might not be discernible to the human eye. The minimally perceptible difference between these two similar colors is known as the difference threshold.

ABSOLUTE VS DIFFERENCE

- **Absolute threshold:** the lowest level of stimulation a person can detect. It is useful for measuring a person's sensitivity to stimuli.
- **Difference threshold:** the minimum amount of change in a stimulus that an individual can detect.
