The Case of Large Taxpayers Branch Office** ,2022-11-09 Master s Thesis in the subject Business economics Accounting and Taxes language English abstract The general objective of the study is to identify the determinant causes of tax evasion in the Ministry of Revenue Large Taxpayers branch office This study tries to address the following specific objectives To identify the impact of tax rate and level of income on tax evasion To indicate whether inflation affects tax evasion or not To show effects of the complexity of the tax system such as penalty and probability of detection on tax evasion To detect the relationship between the perceived role of government and tax evasion To determine the effects of attitude and perception on tax evasion To identify the effects of age gender education level of taxpayers and peer pressure on tax evasion Tax evasion is a global scenario irrespective of any attribute of a country and has been experienced in both developed as well as developing countries Unless nations can mitigate and minimize the magnitude of tax evasion it will be difficult to overcome illicit financial activities there are indicators of the presence of tax evasion and its effects Therefore this research tries to investigate major factors of tax evasion and prioritize these factors for better recommendation to the concerned body and contribute to the improvement of the tax system Criminal Aspects of Tax Fraud Cases Boris Kostelanetz,Louis Bender,1980 **Tax Fraud and Evasion** Ian M. Comisky,1995 **Understanding Tax Evasion Dynamics** Eduardo M. R. A. Engel,James R. Hines,1999 Americans who are caught evading taxes in one year may be audited for prior years While the IRS does not disclose its method of selecting tax returns to audit it is widely believed that a taxpayer s probability of being audited is an increasing function of current evasion Under these circumstances a rational taxpayer s current evasion is a decreasing function of prior evasion since if audited and caught for evading this year the taxpayer may incur penalties for past evasions The paper presents a model that formalizes this notion and derives its implications for the responsiveness of individual and aggregate tax evasion to changes in the economic environment The aggregate behavior of American taxpayers over the 1947 1993 period is consistent with the implications of this model Specifically aggregate tax evasion is higher in years in which past evasions are small relative to current tax liabilities which is the case when incomes or tax rates rise Furthermore aggregate audit related

finances and penalties imposed by the IRS are positively related not only to aggregate current year evasion but also to evasion in prior years. The estimates imply that the average tax evasion rate in the United States over this period is 42% lower than it would be if taxpayers were unconcerned about retrospective audits. **Board of Tax Appeals Reports** United States.
