Media,2022-05-19T22:59:00Z Please note This is a companion version not the original book Sample Book Insights 1 The telegraph a system of sending messages or information to a distant place was invented in 1746 It was a big deal because it suggested that it should be possible to harness electricity to build a signaling device that could send messages over great distances incomparably faster than a human messenger could carry them 2 In 1617 Famianus Strada a learned Italian wrote a book explaining how two needles could be touched with a lodestone and then balanced on separate pivots and the one turned in a particular direction would cause the other to sympathetically move parallel to it 3 The story of the magic needles was based on a germ of truth there are naturally occurring minerals called lodestones that can be used to magnetize needles and other metallic objects However these did not exist in the form described by Strada 4 Chappe s telegraph was a series of

wooden panels that could be flipped from black to white as the second hand passed over a particular number The messages were sent over very great distances very quickly and a telescope was used to observe the panels **Simply Electrifying** Craig R.
