The Burning Question Mike Berners-Lee,Duncan Clark,2013-04-15 The Burning Question reveals climate change to be the most fascinating scientific political and social puzzle in history It shows that carbon emissions are still accelerating upwards following an exponential curve that goes back centuries One reason is that saving energy is like squeezing a balloon reductions in one place lead to increases elsewhere Another reason is that clean energy sources don t in themselves slow the rate of fossil fuel extraction Tackling global warming will mean persuading the world to abandon oil coal and gas reserves worth many trillions of dollars at least until we have the means to put carbon back in the ground The burning question is whether that can be done What mix of politics psychology economics and technology might be required Are the energy companies massively overvalued and how will carbon cuts affect the global economy Will we wake up to the threat in time And who can do what to make it all happen
