The Architecture Machine:

The Architecture Machine Nicholas Negroponte,1970 **The Architecture Machine** Teresa Fankhänel,Andres Lepik,2020-07-20 Today it is hard to imagine the everyday work in an architectural practice without computers Bits and bytes play an important role in the design and presentation of architecture The book which is published in the context of an exhibition of the same name of the Architekturmuseum der TUM at the Pinakothek der Moderne in Munich October 14 2020 to January 10 2021 for the first time considers in depth the development of the digital in architecture In four chapters it recounts this intriguing history from its beginnings in the 1950s through to today and presents the computer as a drawing machine as a design tool as a medium for telling stories and as an interactive communication platform The basic underlying question is simple Has the computer changed architecture And if so by how much The Architecture Machine Steven Raike,1999 *Savage Mind to Savage Machine* Ginger Nolan,2021-06-29 An examination of how concepts of the savage facilitated technological approaches to modernist design Attempting to derive aesthetic systems from natural structures of human cognition designers looked toward the savage mind a way of thinking they associated with a racialized subaltern In Savage Mind to Savage Machine Ginger Nolan uncovers an enduring relationship between the savage and the development of technology and its wide ranging impact on society including in the fields of architecture and urbanism the industrial arts and digital design Nolan focuses on the relationship between the applied arts and the structuralist social sciences proposing that the late nineteenth century rise of Freudian psychology ethnology and structuralist linguistics offered innovations and new opportunities in studying human cognition She looks at institutions ranging from the Public Industrial Arts School of Philadelphia and the Weimar Bauhaus to the MIT Media Lab and the Centre Mondial Informatique revealing a persistent theme of twentieth century design to supplant language with more subliminal aesthetic modes of communication thereby inculcating a deep intimacy between human habit and new technologies of production communication and consumption This book s ultimate critique is of the development of the ergonomics of the spirit the design of the human cognitive apparatus in relation to new aesthetic technologies Nolan sees these ergonomics as a means of depoliticizing societies through aesthetic technologies intended to seamlessly integrate humans into the programs of capitalist modernity Revising key modernist design narratives Savage Mind to Savage Machine provides a deep historical foundation for understanding our contemporary world **The Routledge Companion to Artificial Intelligence in Architecture** Imdat As,Prithwish Basu,2021-05-05 Providing the most comprehensive source available this book surveys the state of the art in artificial intelligence AI as it relates to architecture This book is organized in four parts theoretical foundations tools and techniques AI in research and AI in architectural practice It provides a framework for the issues surrounding AI and offers a variety of perspectives It contains 24 consistently illustrated contributions examining seminal work on AI from around the world including the United States Europe and Asia It articulates current theoretical and practical methods offers critical views on tools and techniques and

suggests future directions for meaningful uses of AI technology Architects and educators who are concerned with the advent of AI and its ramifications for the design industry will find this book an essential reference **The Smartness Mandate** Orit Halpern,Robert Mitchell,2023-01-10 Over the last half century smartness the drive for ubiquitous computing has become a mandate a new mode of managing and governing politics economics and the environment Smart phones Smart cars Smart homes Smart cities The imperative to make our world ever smarter in the face of increasingly complex challenges raises several questions What is this smartness mandate How has it emerged and what does it say about our evolving way of understanding and managing reality How have we come to see the planet and its denizens first and foremost as data collecting instruments In The Smartness Mandate Orit Halpern and Robert Mitchell radically suggest that smartness is not primarily a technology but rather an epistemology Through this lens they offer a critical exploration of the practices technologies and subjects that such an understanding relies upon above all artificial intelligence and machine learning The authors approach these not simply as techniques for solving problems of calculations but rather as modes of managing life human and other in terms of neo Darwinian evolution distributed intelligences and resilience all of which have serious implications for society politics and the environment The smartness mandate constitutes a new form of planetary governance and Halpern and Mitchell aim to map the logic of this seemingly inexorable and now naturalized demand to compute to illuminate the genealogy of how we arrived here and to point to alternative imaginaries of the possibilities and potentials of smart technologies and infrastructures *Architectural Intelligence* Molly Wright Steenson,2017-12-22 Architects who engaged with cybernetics artificial intelligence and other technologies poured the foundation for digital interactivity In Architectural Intelligence Molly Wright Steenson explores the work of four architects in the 1960s and 1970s who incorporated elements of interactivity into their work Christopher Alexander Richard Saul Wurman Cedric Price and Nicholas Negroponte and the MIT Architecture Machine Group all incorporated technologies including cybernetics and artificial intelligence into their work and influenced digital design practices from the late 1980s to the present day Alexander long before his famous 1977 book A Pattern Language used computation and structure to visualize design problems Wurman popularized the notion of information architecture Price designed some of the first intelligent buildings and Negroponte experimented with the ways people experience artificial intelligence even at architectural scale Steenson investigates how these architects pushed the boundaries of architecture and how their technological experiments pushed the boundaries of technology What did computational cybernetic and artificial intelligence researchers have to gain by engaging with architects and architectural problems And what was this new space that emerged within these collaborations At times Steenson writes the architects in this book characterized themselves as anti architects and their work as anti architecture The projects Steenson examines mostly did not result in constructed buildings but rather in design processes and tools computer programs interfaces digital environments Alexander Wurman Price and Negroponte laid the foundation for many of

our contemporary interactive practices from information architecture to interaction design from machine learning to smart cities   Empowering Users through Design David Bihanic,2015-01-12 At the crossroads of various disciplines this collective work examines the possibility of a new end user engagement in ongoing digital technological products and services development It provides an overview of recent research specifically focused on the user s democratic participation and empowerment It also enables readers to better identify the main opportunities of participatory design a concept which encourages the blurring of the role between user and designer This allows people to escape their status as end user and to elevate themselves to the level of creator This book explores new avenues for rethinking the processes and practices of corporate innovation in order to cope with current socio economic and technological changes In so doing it aims to help companies renew industrial models that allow them to design and produce new ranges of technological products and services by giving the user an active role in the development process far beyond the basic role of consumer Intended for designers design researchers and scientists interested in innovation and technology management this book also provides a valuable resource for professionals involved in technology based innovation processes   *Builders of the Vision* Daniel Cardoso Llach,2015-06-05 Builders of the Vision traces the intellectual history and contemporary practices of Computer Aided Design CAD and Numerical Control since the years following World War II until today Drawing from primary archival and ethnographic sources it identifies and documents the crucial ideas shaping digital design technologies since the first numerical control and CAD systems were developed under US Air Force research contracts at MIT between 1949 and 1970 the cybernetic theorization of design as a human machine endeavor the vision of computers as perfect slaves taking care of the drudgery of physical labor the techno social utopias of computers as vehicles of democracy and social change the entrepreneurial urge towards design and construction integration and the managerial ideologies enabling today s transnational geographies of practice Examining the contrasting and often conflicting sensibilities that converge into CAD and BIM discourses globalism utopianism entrepreneurialism and architects desires for aesthetic liberation Builders of the Vision shows that software systems and numerically controlled machines are not merely instruments or tools but rather versatile metaphors reconfiguring conceptions of design materiality work and what it means to be creative Crucially by revealing software systems as socio technical infrastructures that mediate the production of our built environments author Daniel Cardoso Llach builds a strong case for the fields of architecture media and science and technology studies to critically engage with both the politics and the poetics of technology in design Builders of the Vision will be essential reading for scholars and practitioners across disciplines interested in the increasingly complex socio technical systems that go into imagining and building of our artifacts buildings and cities   Soft Architecture Machines Nicholas Negroponte,1975 A utopian view of the future relationship between architects and machines   **The Architect** ,1890   *The American Architect* ,1912   **The Architect** Arthur Holland Forbes,1925   *Sewing Machinery* John W.
