## **The Rust Fungi:**

**The Rust Fungi** K. J. Scott, A. K. Chakravorty, 1982 Morphology and taxonomy of rust fungi Axenic culture and metabolism of rust fungi Genetics of host pathogen interactions in rust Physiology and biochemistry of spore germination Biochemistry of host rust interactions Host defense mechanisms against infection by rust fungi Chemical and biological control of cereal rusts The Rust Fungi of New Zealand Gordon Herriot Cunningham, 1931 *The Ribes of Colorado and New Mexico and Their Rust Fungi* Eugene P. Van Arsdel, Brian W. Geils, 2004 The Rust Fungi of Cereals, Grasses and Bamboos George B. Cummins, 2013-11-11 In the preparation of this descriptive manual of the rust fungi of the grasses of the world the principal goal was to produce a system by which these important pathogens might be recognized on the basis of their morphology without dependence on the identity of the host plant This is an Utopian goal and being Utopian has doubtless not been attained But it is better to have tried and partially failed than not to have tried at all The first attempt to revise the classification on a new basis utilized the rust fungi of the tribe Andropogoneae A Group System was initiated Uredineana 4 5 89 1953 based on the uredinial stage The attempt was satisfactory at the time but was not adaptable when all grass rust fungi were considered Consequently an expanded system was employed when I attempted a summarization of all grass rust fungi The expanded scheme Plant Disease Reporter Supplement 237 1 52 1956 of 9 Groups proved to be a most helpful organizational system and is used here see explanations p Xi in Puccinia Uromyces and Uredo The system is useful and does aggregate generally similar species rather than segregating them as in a host based arrangement The characters used i e presence or absence of paraphyses arrangement of germ pores and echinulate or verrucose spore surface are subject to minimal intergradations **Studies on the Physiology of the Rust Fungi** Hugh Howison Hotson, 1951 The Forester John Nisbet, 1925 **Fungal Pathology** J.W. Kronstad, 2000-09-30 The pace of research on fungi has been accelerating over the past decade As a result molecular biochemical and cell biological studies have opened up new areas of investigation for many of the most important fungal pathogens of crop plants Similarly these approaches have provided new information on fungal pathogens of animals and insects and on fungal endophytes The collection of chapters in this book provides an excellent update on recent progress for many of the important plant pathogenic fungi that either cause significant economic problems or that serve as useful experimental organisms for gaining general insights The inclusion of chapters on other fungi will allow readers to make comparisons and draw parallels between a variety of pathogens In this regard this book provides a unique perspective that will be valuable to a wide range of readers from senior undergraduates to senior investigators **Genetics, Evolution, and Biological Control** Lester E. Ehler, R. Sforza, T. Mateille, 2003-12-03 Annotation This book has been developed from the keynote addresses delivered at the third IOBC International Symposium co organized with CILBA that was held in Montpellier in October 2002 to address recent developments in genetics and evolutionary biology as applied to biological control Chapters are organized around the following themes Genetic structure of

pest and natural enemy populations Molecular diagnostic tools in biological control Tracing the origin of pests and natural enemies Predicting evolutionary change in pests and natural enemies Compatibility of transgenic crops and natural enemies Genetic manipulation of natural enemies The authors identify new issues for each of the major approaches in applied biological control These include the 1 use of molecular genetics to trace the origin of target pests in classical biological control 2 potential of mass reared transgenic agents in augmentative biological control and 3 compatibility of transgenic crops and natural enemies in conservational biological control

**The Genetics of Teliospore Production and Microevolution in Rust Fungi**, Brent Donald McCallum, 1995 *The Cereal Rusts* William Bushnell, 2012-12-02 The Cereal Rusts Volume I Origins Specificity Structure and Physiology presents the historical evolutionary taxonomic structural genetic and physiological characteristics of cereal rust fungi and the diseases they cause in cereal crops The cereal rusts are potentially serious disease threats to cereal crops and have caused widespread losses in wheat oats barley and related crops This three part volume brings together in a single reference source the accumulated knowledge complex challenging science of cereal rusts The first chapters of this 16 chapter volume cover the pioneering contributions of early scientists to the knowledge of cereal rusts the evolution of cereal rusts and the taxonomy of cereal rust fungi The book also examines the specificity of cereal rusts including formae speciales race specificity pathogen host genetics histology and molecular biology of host parasite specificity and the genetics of rust fungus populations as reflected by virulence frequency The text further discusses the structure and physiology aspects the germination of urediospores and differentiation of infection structures and the infection under artificial conditions The ultrastructure of hyphae and urediospores the development and physiology of teliospores and the obligate parasitism and axenic culture of rust fungi are also explained This volume also encompasses the structure and physiology of haustoria structural and physiological alterations in susceptible hosts and effects of rust on plant development in relation to nutrient translocation Cereal rust investigators plant pathologists agronomists agriculturalists research biochemists cytologists geneticists physiologists taxonomists epidemiologists and pathologists will find this book invaluable

**Ultrastructure of rust Fungi** Michele Heath, 2012-12-02 Ultrastructure of Rust Fungi provides a comprehensive review of rust ultrastructure and host parasite relations This book also critically analyzes the studies that have been done in this field Organized into seven chapters this book begins with the morphology and ontogeny of sori and spores It then explains the infections of the susceptible host and the vegetative growth of the fungi in it It also describes the possibility of incompatibility in plant rust associations as well as the parasites of rust fungi The dynamics of growth and differentiation are emphasized in this book rather than just the mature stage of the rusts Moreover this book identifies some topics in which ultrastructural research is particularly lacking and which provide fertile areas for future research This book will be a valuable reference source for fungal morphologists taxonomists and plant pathologists It will also be helpful to others interested in the anatomy and associated biology of the rusts
