Japanese Digital Cultural Promotion Nadejda Gadjeva,2023-06-16 Gadjeva uses Kyoto as a case study to explore the innovative mechanisms being used to promote Japanese culture and cultural properties since the outbreak of COVID 19 Beginning by setting out the main initiatives and actors involved in preserving introducing and utilizing Kyoto s cultural heritage Gadjeva proceeds to discuss alternative approaches using digital technologies These tools include remote access virtual reality augmented reality augmented virtuality and mixed reality She looks at how such approaches have been applied to Kyoto s digital museums real time online experiences and other virtual projects presenting tangible intangible and folk heritage In doing so she draws on a wide range of interviews with experts from the Japan Foundation the Kyoto Art Center and other related institutions to investigate the limitations and possible strategies for further development of these practices She also interviews scholars government officials and experts from Europe about the prospects for further remote online experiences applied both specifically to Kyoto and more broadly to cultural tourism Based on the findings the book discusses particular future challenges and suggests specific policies and project proposals for further remote online experiences of Kyoto s cultural properties A valuable read for professionals and scholars of cultural and tourism studies that will be of particular interest to those specializing in Japan

Nutrient Metabolism and Complications of Type 2 Diabetes Mellitus Hongji Zhang,Rong Huang,Qingqing Yin,Haoqiang Zhang ,Shaohua Wang,2026-03-17 The nutrient metabolism of patients with type 2 diabetes mellitus T2DM is closely linked to diabetes related complications Nutrient metabolism disorders particularly those involving glucose cholesterol fatty acids uric acid amino acids and vitamins metabolism are not only associated with classic complications of diabetes such as diabetic cerebrovascular disease cardiovascular disease nephropathy retinopathy and peripheral neuropathy but also with potential diabetic outcomes like cognitive dysfunction abnormal bone metabolism metabolic fatty liver disease and sarcopenia Currently there is extensive research on the relationship between nutrient metabolism and classic complications and comorbidities of diabetes However studies focusing on non classical complications such as cognitive dysfunction bone metabolism abnormalities metabolic fatty liver disease and sarcopenia are still scarce Therefore there is an urgent need to delve into this under researched area specifically the relationship between nutrient metabolism and these non classical complications This relationship encompasses not only the occurrence of these complications but also their progression and key events such as dementia fractures hospitalization mortality or the progression to advanced stages of disease like the transition from metabolic fatty liver to metabolic steatohepatitis and even the development of hepatocellular carcinoma This Research Topic aims to explore the relationship between nutrient metabolism including glucose cholesterol fatty acids uric acid amino acids and vitamins metabolism and diabetic complications including above mentioned classical complications and non classical complications in various populations e g different age and genders from the perspective of clinical nutrition Special attention will be given to the less

commonly recognized non classical complications in patients with T2DM We hope that these studies will shed light on the key nutrient metabolism factors influencing patient outcomes and potentially lead to the development of appropriate intervention strategies in patients with T2DM We welcome submissions including but not limited to the following aspects The relationship between nutrient metabolism and cognitive impairment in patients with T2DM particularly its connection to mild cognitive impairment and dementia as well as the role of nutrient metabolism in the progression from mild cognitive impairment to dementia among patients with T2DM The relationship between nutrient metabolism and abnormal bone metabolism in patients with T2DM The relationship between nutrient metabolism and metabolic fatty liver disease in patients with T2DM particularly its connection to the transition from metabolic fatty liver to metabolic steatohepatitis and even the development of hepatocellular carcinoma The relationship between nutrient metabolism and sarcopenia in patients with T2DM Other classic complications of T2DM related to nutrient metabolism not yet addressed in previous studies represent an intriguing area of research

The metaverse is a large scale social environment based on the convergence of virtual and physical reality Participants can take part in the metaverse through virtual augmented or mixed reality They can carry out everyday activities together ranging from entertainment through to education business politics health or even legal proceedings This may have a profound impact on the way we live providing new beneficial ways of carrying out a multitude of activities but may also introduce a multitude of problems that we cannot envisage Mobile devices in conjunction with the world wide web and social media have led to revolutionary changes in society including on the positive side deep connectivity between people but on the other a potential threat to democracy The immersive nature of the metaverse will potentially enhance both the positive and negative impact by an order of magnitude The metaverse is an idea rather than a reality There exist systems that offer nascent examples of a metaverse such as VRChat Horizon Worlds Decentraland and others but these are virtual environments that can be visited simultaneously by a multitude of participants who can see avatars of one another and interact together in limited ways Such systems have been around since the 1990s usually called collaborative virtual environments CVEs The modern versions introduce conceptually nothing new except for their scale in implementation Even the avatars often used today are hardly more elaborate than those that were used in the 1990s and early 2000s although today we have the possibility of using personalized avatars of increasing quality Therefore the central problem to be addressed in this Research Topic is to foresee how a metaverse might actually go beyond the well known idea and implementations of CVEs How will experiences in the metaverse be different from experiences in CVEs What technology underpins the creation of such a metaverse What applications are likely to emerge across a range of activities that are likely

to be positive for humanity What are the ethical legal and political implications both positive and dangers Primarily what evidence can be offered to support the views or findings of the authors This Research Topic is in conjunction with the conference A Metaverse for the Good although submissions that were not initially presented at this conference are also welcome Papers may be of any of the types afforded by Frontiers although those that include empirical evidence for the arguments that they present will be prioritized The themes of the Research Topic include the following ideally including specific evidentiary examples Metaverse as an agent for a more inclusive responsible and sustainable business and economic environment The economic impact of the metaverse on companies industries and economies The future of work for example whether working from home in immersive real time collaboration with others around the world including with people physically present at the workplace will be feasible Are there examples of this today New models for metaverse based education massive online physical and virtual classrooms that anyone can join from anywhere The use of AI in the foundations implementation and applications in a metaverse The impact of immersive experiences on the individuals in terms of learning engagement self efficacy Technical challenges including computer graphics distributed and networked systems block chain human computer interaction Neurotechnology for example whether people will be able to interact in the metaverse through brain computer interfaces and the impact for people with physical disabilities Ethical regulatory and legal aspects ranging from ethical problems including the use of AI how the metaverse might be regulated The metaverse for medical and psychiatric treatment **Bedford's Tech Edge** ,2003 Documentation Abstracts ,1996 *Research Centers Directory* ,2005 **The Futurist** ,1998 **Business Publication Advertising Source** ,2001-10 The Art and Science of Virtual Content Creation Raquel Victoria Benítez Rojas,2026-04-22 The Art and Science of Virtual Content Creation Beyond the Screen is a wide ranging guide that examines the dynamic fusion of creativity and technology in crafting immersive digital experiences It explores how artistic vision and digital tools function as equal partners in the creation of compelling virtual media moving beyond traditional boundaries to explore the vast creative potential of the digital realm This book provides both theoretical foundations and practical strategies for conceptualizing developing and producing virtual content across multiple platforms and formats This book covers the complete life cycle of virtual content creation guiding readers through every phase from initial concept development to postproduction It explores the unique opportunities and challenges of virtual reality augmented reality and mixed reality while introducing essential technical skills including 3D modeling animation spatial audio and interactive design Through real world case studies and industry experiences this book describes innovative storytelling methods and examines emerging technologies such as procedural generation artificial intelligence and blockchain as future drivers of virtual media Equally important it addresses the ethical and societal implications of virtual content discussing critical issues of authenticity representation and privacy in increasingly lifelike digital experiences Beyond the Screen is designed for both newcomers seeking foundational knowledge and seasoned

professionals looking to expand their expertise in virtual content creation This book serves digital artists game developers filmmakers UX designers and media professionals who want to harness the power of immersive technologies Academic researchers students in digital media programs and creative technologists will find valuable insights into the evolving landscape of virtual storytelling while industry practitioners will benefit from actionable strategies and concrete methods for translating imaginative concepts into immersive digital realities
