Who owns data?

Organizations today have more data than they have ever had before. Advancements in technology play a critical role in generating large volumes of data. According to Babcock (2006), a study published by Information Week, the average company's data volumes nearly double every 12 to 18 months. Databases are not only growing bigger, but they also are becoming real-time. Based on Ali (2012), as the number of activities increases with 'My Attributes', 'My Data' grow and, in turn, increase the number of data owners. What mostly is happening is that with every transaction, information is shared as data. Each time information is shared, new data are generated. As new data are generated, new ownership is created. The diagram below a tip of the iceberg of data generation from 'My Data'!

Let's specifically talk about banking data. As a bank user, we should have to provide personal information to create an account. Once we create, the bank will start storing any data generated

driven Given the hype in the market for big data analytics and AI every CIO has a budget for analytics but very little clarity on where to begin or how to choose and prioritize the analytics projects Most end up investing in a visualization platform like Tableau or QlikView which in essence is an improved version of their BI dashboard that the organization had invested into not too long ago The most important stakeholders the decision makers are rarely kept in the loop while choosing analytics projects This book provides a fail safe methodology for assured success in deriving intended value from investments into analytics It is a practitioners handbook for creating a step by step transformational roadmap prioritizing the big data for the big decisions the 10% of decisions that influence 90% of business outcomes and delivering material improvements in the quality of decisions as well as measurable value from analytics investments The acid test for a data driven organization is when all the big decisions especially top level strategic decisions are taken based on data and not on the collective gut feeling of the decision makers in the organization **Library of Congress Information Bulletin** ,1981 The Principles of Sociology: pt. 1.
