Spectroscopic Tricks:

Spectroscopic Tricks Leopold May, 2012-12-06 *Spectroscopic Tricks* was introduced in 1959 as a special section in the journal *Applied Spectroscopy*. Its purpose was to provide a means for communicating information on new devices, modifications of existing apparatuses and other items of this nature of interest to the working spectroscopist. That it has proved valuable is indicated by the continuing publication of this section now under the title of *Spectroscopic Techniques*. However, the usefulness of these contributions scattered through the many issues of the journal diminishes as time passes since the reader must consult the annual indices of many volumes of the journal to find the contribution that may hold the solution to his problem. The collection of the contributions into a single volume for the years 1959 through 1965 made it easier for the reader to make this search. The success of the first volume has prompted the continuation of these collections. The contributions in this second volume are selected from the years 1966 through 1969. They are arranged in the same manner as in the previous volume according to the area of spectroscopy. Those concerned with the same devices are placed together so that the reader can compare them readily. To maintain the advantages inherent in a single collection of articles, the subject index for this volume includes all the entries and page references from the original volume. Both author and journal indices are also provided, the latter citing the original *Applied Spectroscopy* edition. *Spectroscopic tricks* Leopold May, 1974

Spectroscopic Properties of Inorganic and Organometallic Compounds N N Greenwood, 2007-10-31 *Spectroscopic Properties of Inorganic and Organometallic Compounds* provides a unique source of information on an important area of chemistry. Divided into sections mainly according to the particular spectroscopic technique used, coverage in each volume includes NMR with reference to stereochemistry, dynamic systems, paramagnetic complexes, solid state NMR and Groups 13, 18, nuclear quadrupole resonance spectroscopy, vibrational spectroscopy of main group and transition element compounds and coordinated ligands, and electron diffraction. Reflecting the growing volume of published work in this field, researchers will find this Specialist Periodical Report an invaluable source of information on current methods and applications. Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research. Compiled by teams of leading experts in their specialist fields, this series is designed to help the chemistry community keep current with the latest developments in their field. Each volume in the series is published either annually or biennially and is a superb reference point for researchers. www.rsc.org/spr

Structural Identification of Organic Compounds with Spectroscopic Techniques Yong-Cheng Ning, 2005-05-06 Clearly structured, easy to read and optimal to understand, this extensive compendium fills the gap between textbooks devoted to either spectra interpretation or basic physical principles.

The original Chinese editions have already sold over 18 500 copies and the material is taken from the latest literature from around the world plus technical information provided by the manufacturers of spectroscopic instruments Alongside basic methods Professor Ning presents up to date developments in NMR MS IR and Raman spectroscopy such as pulsed field gradient technique LC NMR and DOSY He stresses the application of spectroscopic methods interpreting them in great detail and depth since most of the selected spectra may be applied to practical work as well as summarizing the rules for their interpretation He also incorporates his original ideas including a comparison of the common points in different spectroscopic techniques This monograph features a unique structure a typical example being the discussion of 2D NMR starting from pulse sequence units which construct various pulse sequences for related 2D NMR A complete chapter deals with the determination of configurations and conformations of organic compounds and even biological molecules from the viewpoint of spectroscopic methodologies while one whole section is dedicated to the interpretation of mass spectra produced by soft ionization techniques The principles of mass analyzers especially the ion trap are discussed in great depth together with a concise summary of the MS fragmentation and rearrangement of common compounds allowing readers to easily predict related mass spectrometric reactions All the three kinds of library retrieval of mass spectra are presented in detail together with recent developments in molecular vibration spectroscopy The whole is rounded off with several appendices including a subject index for rapid reference With a foreword by the Nobel prizewinner Richard R Ernst
