Survey Of Preconditioned Iterative Methods:

A Survey of Preconditioned Iterative Methods Are Magnus Bruaset, 2018-12-13 The problem of solving large sparse linear systems of algebraic equations is vital in scientific computing even for applications originating from quite different fields A Survey of Preconditioned Iterative Methods presents an up to date overview of iterative methods for numerical solution of such systems Typically the methods considered are w

Surveying a Dynamical System Khalid Alhumaizi, Rutherford Aris, 1996-05-15 When a dynamical system has a large number of parameters it is not possible to get a completely comprehensive picture of all the types of behavior that it may display and one must be content with surveying the system along various corridors of lower dimension Using an example with three differential equations and six parameters it is shown how the available methods of singularity theory bifurcation analysis normal forms etc can be used to build up a picture of varied and interesting behavior The model is a generalization of the Gray Scott reaction scheme in a single stirred vessel to a two phase reactor consisting of a reaction chamber and a reservoir communicating with each other through a semi permeable membrane Two forms exist according as to whether A is fed to the reactor and B to the reservoir or vice versa and show interesting differences of behavior Both models undergo Hopf bifurcations pitchfork transitions have homoclinic orbits take the period doubling route to chaos and one gets there by intermittency Besides being of interest to mathematicians as an ecological study of a differentiable system it is hoped that though idealized the fact that it corresponds closely to a real type of reactor will make it attractive to control engineers and others as a testing ground for their various methods and devices This book will be of particular interest to students and researchers in mathematics and engineering particularly those working in bifurcation or chaos theory
