designers I decided to write this book to introduce the basics and principles in considering different loads and their distribution methods on the structural elements. Thereby this book is prepared in 6 chapters including Dead and live load and their distribution, Wind load, Seismic load, Soil load, Hydrostatic load, and Crane load. One of the noticeable parts of this book is chapter two which focuses on the wind load based on the Malaysian standard code. Design Of Steel Structures L S Jayagopal, First course for the learners of steel structural design at UG level, this book is based on limit state design as per the Indian Code of Practice General construction in steel IS 800 2007. It explains theoretical concepts which form the basis of codal provisions. Emphasis lies on principal axes based compression members, peripheral load distribution for base plates, limit state design of base plate bearing column with moment unsymmetrically loaded beam design, tension field web design in plate girders section and member design for bi axially loaded beam columns which are unique to the book. Practical insight provided in chapters of applied design. **Reinforced Concrete** B.S. Choo, T.J. MacGinley, 2018-10-08. This new edition of a highly practical text gives a detailed presentation of the design of common reinforced concrete structures to limit state theory in accordance with BS 8110.
