Model Theory of Stochastic Processes Sergio Fajardo, H. Jerome Keisler, 2017-03-30 Since their inception the Perspectives in Logic and Lecture Notes in Logic series have published seminal works by leading logicians Many of the

original books in the series have been unavailable for years but they are now in print once again In this volume the fourteenth publication in the Lecture Notes in Logic series Fajardo and Keisler present new research combining probability theory and mathematical logic It is a general study of stochastic processes using ideas from model theory a key central theme being the question When are two stochastic processes alike The authors assume some background in nonstandard analysis but prior knowledge of model theory and advanced logic is not necessary This volume will appeal to mathematicians willing to explore new developments with an open mind

Stochastic Models In The Life Sciences And Their Methods Of Analysis Frederic Y M Wan, 2019-08-29 the volume is impressively accessible The result is a book that is valuable and approachable for biologists at all levels including those interested in deepening their skills in mathematical modeling and those who seek an overview to aid them in communicating with collaborators in mathematics and statistics The former group of readers may especially appreciate the first chapter an introduction to key concepts in probability and the set of ten assignments provided as an appendix

CHOICE Biological processes are evolutionary in nature and often evolve in a noisy environment or in the presence of uncertainty Such evolving phenomena are necessarily modeled mathematically by stochastic differential equations SDE which have been recognized as essential for a true understanding of many biological phenomena Yet there is a dearth of teaching material in this area for interested students and researchers notwithstanding the addition of some recent texts on stochastic modelling in the life sciences The reason may well be the demanding mathematical prerequisites needed to solve SDE A principal goal of this volume is to provide a working knowledge of SDE based on the premise that familiarity with the basic elements of a stochastic calculus for random processes is unavoidable Through some SDE models of familiar biological phenomena we show how stochastic methods developed for other areas of science and engineering are also useful in the life sciences In the process the volume introduces to biologists a collection of analytical and computational methods for research and applications in this emerging area of life science The additions broaden the available tools for SDE models for biologists that have been limited by and large to stochastic simulations

[A Course in Stochastic Processes](#) Denis Bosq, Hung T. Nguyen, 2013-03-09 This text is an Elementary Introduction to Stochastic Processes in discrete and continuous time with an initiation of the statistical inference The material is standard and classical for a first course in Stochastic Processes at the senior graduate level lessons 1-12 To provide students with a view of statistics of stochastic processes three lessons 13-15 were added These lessons can be either optional or serve as an introduction to statistical inference with dependent observations Several points of this text need to be elaborated 1 The pedagogy is somewhat obvious Since this text is designed for a one semester course each lesson can be covered in one week or so Having in mind a mixed audience of students from different departments Math ematics Statistics Economics Engineering etc we have presented the material in each lesson in the most simple way with emphasis on motivation of concepts aspects of applications and computational procedures

Basically we try to explain to beginners questions such as What is the topic in this lesson Why this topic How to study this topic math ematically The exercises at the end of each lesson will deepen the stu dents understanding of the material and test their ability to carry out basic computations Exercises with an asterisk are optional difficult and might not be suitable for homework but should provide food for thought
