## **The IGF System:**

*The IGF System* Ron G. Rosenfeld, Charles T. Roberts, 1999-06-01 It has been over 40 years since the original report by Salmon and Daughaday demonstrating that the ability of GH to stimulate sulfation of cartilage was mediated by a sulfation factor. In the ensuing decades it has become apparent that this sulfation factor activity encompasses a complex system of ligands, IGFs, receptors, and carrier proteins that are in turn responsible for a wide array of cellular actions. The IGF system has been demonstrated to be critically involved in both intrauterine and postnatal growth and to have important implications in cancer biology as well, owing to the ability of the IGFs to function in endocrine, paracrine, and autocrine modes and given the wide distribution of IGFs in virtually every organ system. The contributions to The IGF System reflect the wide span of interest in the IGF system and its implications for normal and abnormal growth and metabolism. The chapters have been divided into four broad sections: I Molecular biology of the IGF system; II Biological actions of the IGFs; III IGF physiology; and IV Clinical aspects of the IGFs. We have made every effort to highlight the major contemporary themes in IGF biology but as is inevitable in such a fast-moving field, perspectives will continue to change as new information is accumulated. **IGF and**

**Nutrition in Health and Disease** M. Sue Houston, Jeffrey M. P. Holly, Eva L. Feldman, 2004-08-04 A benchmark review on how specific nutrients or adverse nutritional states impact the components of the IGF/Insulin-like Growth Factor system and affect human health and disease. The authors describe the fundamentals of the IGF system, explain its basic mechanisms of action, illuminate its essential role in physical development across the life span, and highlight the link between normal and abnormal cellular growth resulting in tumor formation. They also fully examine the clinical aspects of nutrition and IGF from pre- and postnatal development through old age in the maintenance of normal metabolism, bone and muscle health, and their role in pathological states. Special attention is given to critical illness, diabetes, gastrointestinal diseases, kidney failure, endocrine dysfunctions, cardiovascular disease, neurological disorders, and cancer, as well as to their potential for IGF therapy.

R. Clemmons, Martin O. Savage, 2005-01-01 The IGF system pervades the fields of development, linear and cellular growth, and metabolism. Not only is the functional integrity

of the IGF system crucial for normal linear growth and metabolism it is also of fundamental importance for normal fetal development This book consists of a compilation of chapters based on presentations at a symposium entitled IGFs and IGFs Assessment and Therapeutic Benefit Highly qualified basic scientists and endocrinologists report new advances in the broad field of IGF physiology and pathophysiology related to clinical medicine New and topical areas of the IGF field are covered focussing particularly on clinically relevant topics related to growth pediatric and adult growth hormone deficiency metabolic disorders diabetes mellitus and neurology Molecular and developmental defects are discussed as are the contributions to clinical diagnosis and management of measurement of IGFs and IGFs The therapeutic potential of recombinant human IGFs and IGFs in a range of disorders is also covered The present volume of Endocrine Development will be of particular interest to scientists and clinicians working in IGF and IGF related fields and to clinicians working in both pediatric and adult endocrinology and metabolism

**The IGF System During Growth and Differentiation of the Mouse**, 1999 **Handbook of Behavior, Food and Nutrition** Victor R. Preedy, Ronald Ross Watson, Colin R. Martin, 2011-04-15 This book disseminates current information pertaining to the modulatory effects of foods and other food substances on behavior and neurological pathways and importantly vice versa This ranges from the neuroendocrine control of eating to the effects of life threatening disease on eating behavior The importance of this contribution to the scientific literature lies in the fact that food and eating are an essential component of cultural heritage but the effects of perturbations in the food cognitive axis can be profound The complex interrelationship between neuropsychological processing diet and behavioral outcome is explored within the context of the most contemporary psychobiological research in the area This comprehensive psychobiology and pathology themed text examines the broad spectrum of diet behavioral and neuropsychological interactions from normative function to occurrences of severe and enduring psychopathological processes

**Insulin-Like Growth Factors in Health and Disease, An Issue of Endocrinology and Metabolism Clinics** Claire M. Perks, Jeff M.P. Holly, 2012-06-28 This issue of Endocrinology Clinics authored by experts worldwide provides essential updates about insulin like growth factors IGFs The physiology is examined including the latest in what we have learned from animal models as well as humans The issue also covers IGFs and IGF system in the following growth disorders adipogenesis and obesity muscle function and disease bone cancer cardiac function and disease normal and diseased kidney peripheral nervous systems gastrointestinal diseases diabetes and metabolism and IGF 1 central degenerative diseases

**The Role of the IGF System in Cancer, International Meeting**, 2006 **Endocrinology of the Lung** Carole R. Mendelson, 2000-05-29 Carole Mendelson has assembled a panel of leading investigators to critically review the various classes of endocrine paracrine and neuroendocrine factors that play a role in the regulation of lung development and surfactant production Special attention is accorded the actions of glucocorticoids in lung development and the synthesis of surfactant glycerophospholipids and proteins Also extensively treated are the roles of cell cell interactions

and the elaboration of various growth factors and bioactive peptides in pulmonary cell differentiation gene expression and pathophysiology State of the art and comprehensive Endocrinology of the Lung constitutes a powerful new standard guide that illuminates the complex endocrinology of the lung for all those actively investigating hormone action in pulmonary biology and medicine today

**The IGF System During Growth and Differentiation of the Mouse** Marjolein van Kleffens, 1999

Novel Diagnostic and Therapeutic Strategies in the Management of Cerebral Gliomas Valeria Barresi, Maria Caffo, Giuseppe Lombardi, Letteria Minutoli, Emeline Tabouret, Herui Wang, 2024-10-29

Cerebral gliomas account for 45% of all primary central nervous system CNS tumors The median survival after the initial diagnosis of glioblastoma GBM is only 15 months and less than 10% of patients survive three years post diagnosis Surgical treatment followed by adjuvant therapies such as radiotherapy and chemotherapy represents the classical strategy in glioma management The revised WHO 2016 classification now distinguishes the oligodendrogliomas with 1p19q codeletion and IDH mutation from the astrocytomas with or without IDH mutations thereby creating homogenous and pathologically distinct subgroups While the status of gene expression and mutations define components of GBM subtypes it was also found that response to therapies was different for each subtype suggesting that personalized treatment based on genomic alterations could lead to a more favorable outcome for this disease

Post-translational Modifications and Associations in the IGF System Olgica Nedic, 2014-03

The incidence of cancer diabetes mellitus cardiovascular and some other diseases continues to increase and there are still no sufficiently successive healing and preventive strategies Insulin like growth factors IGFs play important roles during entire life and depending on the biochemical pathway in which they are involved they may be regarded as growth factors hormones or cytokines IGFs exert their functions after binding to specific receptors and their availability is regulated by IGF binding proteins Altered activity in the IGF signaling pathways is connected with diseases but data are controversial as both beneficial and harmful effects of IGFs were recorded Traditional approaches to study biochemical pathways mostly based on the synthesis and clearance rates are not sufficient Post translational protein modifications and associations with other biomolecules may represent an intermediate level of control which deserves more attention This book provides an overview of the post translational events which affect the IGF system offering experimental data to document structural and functional changes which as a final consequence have altered IGF activity

**The Role of the IGF/Insulin-IGFBP Axis in Normal Physiology and Disease** Claire Perks, Shin-Ichiro Takahashi, 2022-05-17

**The Growth Hormone/Insulin-Like Growth Factor Axis during Development** Isabel Varela-Nieto, Julie Ann Chowen, 2005-12-17

Insulin like growth factor IGF I is a widely expressed growth factor with diverse effects on many tissues throughout development and in adult life The purpose of this work is to provide detailed and updated information on the role of the growth hormone GH IGF axis in fetal and postnatal development as well as its physiological functions and implications in pathology
