The Tsql2 Temporal Query Language Richard T Snodgrass,1995-08-31 [The TSQL2 Temporal Query Language](#)
Richard T. Snodgrass,2012-12-06 Temporal databases have been an active research topic for at least fifteen years During this time several dozen temporal query languages have been proposed Many within the temporal database research community perceived that the time had come to consolidate approaches to temporal data models and calculus based query languages to achieve a consensus query language and associated data model upon which future research can be based While there were many query language proposals with a diversity of language and modeling constructs common themes kept resurfacing However the community was quite frag mented with each research project being based on a particular and different set of assumptions and approaches Often these assumptions were not germane to the research per se but were made simply because the research required a data model or query language with certain characteristics with the partic ular one chosen rather arbitrarily It would be better in such circumstances for research projects to choose the same language Unfortunately no existing language had attracted a following large enough to become the one of choice In April 1992 Richard Snodgrass circulated a white paper that proposed that a temporal extension to SQL be produced by the research community Shortly thereafter the temporal database community organized the ARPA NSF In ternational Workshop on an Infrastructure for Temporal Databases which was held in Arlington TX in June 1993 *Valid-time Selection and Projection in TSQL2* Christian S. Jensen,Suchen Hsu,Richard T. Snodgrass,1994 Abstract Temporal databases have now been studied for more than a decade During that period of time numerous query languages have been proposed for temporal databases One of the essential components of a temporal query language is valid time selection which allows the user to retrieve tuples according to their valid time relationship Often this component is closely tied to another important component valid time projection which defines the timestamps of the tuples in query results Here nine different temporal query languages primarily SQL and QUEL extensions are examined with a focus on valid time selection and projection Based on that survey the specific design of the valid time selection and projection components of the consensus temporal query language TSQL2 are presented

Temporal Databases Dr. Kamran Ahsan & Prativadi Vijay,2014-06-17 Need for database reasonably increased as the data manipulation changes and leverage for storage has become essential Temporal database has been one of the special kinds in the field of database According to the concept of time stamping various models has emerged and temporal models namely McKenzie BenZvi s and non temporal models namely Colby Deshpande and Larson s model has grabbed unique attention towards in this area of temporal database Reliable and Enhanced stratum middleware management capabilities enable the temporal queries for ease in transactions Richness in point based and maximum timestamp approaches provide high indexing mechanisms which make efficient storage of data in tree structure format The proposed prototype model uses Temporal Relational Algebra and TSQL2 declarative language which display the past present and future related data The

inclusion of T4SQL instead of TSQL2 Temporal Multi Secure Database and spatio temporal database model can make this model stronger than present and make it work more efficiently

Mike Jackson, David Nelson, Sue Stirk, 2005-06-16 The British National Conference on Databases BNCOD was established in 1980 as a forum for research into the theory and practice of databases The original conference in the series took place at the University of Aberdeen To be precise this conference was in fact entitled ICOD which stood for International Conference on Databases It was the intention when the series began that an ICOD would take place every two years whilst a BNCOD would run in the years in between As the record shows ICOD was only held in 1980 and 1983 The more junior conference has managed to acquire a lifetime much longer than that of its senior relative If truth were known however BNCOD has over the years grown into ICOD and although the conference is still titled British National it is in fact an international conference that takes place on a yearly basis Proof of this can be obtained simply by looking at the table of contents of these proceedings which clearly show that the majority of papers presented at this year's conference came from contributors whose affiliations are outside the UK Despite the range of papers on offer BNCOD still retains its uniquely British flavor The Programme Committee is drawn from UK academics and the conference is always held at a British university or in earlier years a polytechnic
