**Vygotsky and Special Needs Education** Harry Daniels, Mariane Hedegaard, 2011-02-17 This is an international guide to using Vygotsky's theories to support children and schools in special needs education. After Piaget, Vygotsky is perhaps the most important educational theorist of the twentieth century. Support for schools and pupils with additional needs has been theorised in a number of ways over the last 100 years and much interest has been shown in the development and relevance of Vygotsky's ideas. It is ironic therefore that so little has been written about the practical application of such a perspective to the field. This book brings together researchers working in the UK and Denmark to reflect on the benefits to be had from taking such a stance on support for children and schools. All the contributors are connected with work that has been done at PPUK and CSAT research centres at the universities of Copenhagen and Bath. Both centres enjoy strong reputations for their contributions to cultural historical theory. The authors pursue issues raised by a post-Vygotskian approach and which make important contributions to the development of the fields of policy and practice.

**Successful Student Writing through Formative Assessment** Harry Grover Tuttle, 2013-09-13 Use formative assessment to dramatically improve your students' writing. In *Successful Student Writing Through Formative Assessment*, educator and international speaker Harry G. Tuttle shows you how to guide middle and high school students through the prewriting, writing, and revision processes using formative assessment techniques that work. This brand new set of strategies includes real writing samples plus easy-to-use applications that will allow you to monitor, diagnose, and provide continual feedback to your students. You'll help them perfect their written communication skills and ready them for further growth. Tuttle offers tips on breaking large writing assignments into several smaller tasks, identifying red flags, varying your feedback methods, and more. Enhance your instruction by assessing students at specific points throughout the writing process and help them to become better writers as a result.

**Five Design-Sheets: Creative Design and Sketching for Computing and Visualisation** Jonathan C. Roberts, Christopher J. Headleand, Panagiotis D. Ritsos, 2017-05-28 This book describes a structured sketching methodology to help you create alternative design ideas and sketch them on paper. The Five Design Sheet method acts as a check list of tasks to help you think through the problem, create new ideas, and to reflect upon the suitability of each idea. To complement the FdS method, we present practical sketching techniques, discuss problem solving, consider professional and ethical issues of designing interfaces, and work through many examples. Five Design Sheets: Creative Design and Sketching for Computing and Visualization is useful for designers of computer interfaces or researchers needing to explore alternative solutions in any field. It is written for anyone who is studying on a computing course and needs to design a computing interface or create a well-structured design chapter for their dissertation, for example. We do acknowledge that throughout this book we focus on the creation of interactive software tools and use the case study of building data visualization tools. We have, however, tried to keep the techniques general enough such that it is beneficial for a wide range of people with different challenges and

different situations and for different applications      *Writing Strategies for Science* Stephanie Macceca,2007-01-15 Help budding scientists get it write with this treasure trove of ready to implement strategies to help learners write and understand science content This resource brings it all together in one easy to use format featuring an overview of the writing process practical and detailed strategies to improve writing skills and activities with classroom examples by grade ranges Specific suggestions are included with every strategy to help differentiate instruction for various levels of learners and learning styles Includes a Teacher Resource CD of activity reproducibles and graphic organizers 2      *Teaching Undergraduate Science* Linda C. Hodges,2023-07-03 This book is written for all science or engineering faculty who have ever found themselves baffled and frustrated by their undergraduate students lack of engagement and learning The author an experienced scientist faculty member and educational consultant addresses these issues with the knowledge of faculty interests constraints and day to day concerns in mind Drawing from the research on learning she offers faculty new ways to think about the struggles their science students face She then provides a range of evidence based teaching strategies that can make the time faculty spend in the classroom more productive and satisfying Linda Hodges reviews the various learning problems endemic to teaching science explains why they are so common and persistent and presents a digest of key ideas and strategies to address them based on the research she has undertaken into the literature on the cognitive sciences and education Recognizing that faculty have different views about teaching different comfort levels with alternative teaching approaches and are often pressed for time Linda Hodges takes these constraints into account by first offering a framework for thinking purposefully about course design and teaching choices and then providing a range of strategies to address very specific teaching barriers whether it be students motivation engagement in class ability to problem solve their reading comprehension or laboratory research or writing skills Except for the first and last chapters the other chapters in this book stand on their own i e can be read in any order and address a specific challenge students have in learning and doing science Each chapter summarizes the research explaining why students struggle and concludes by offering several teaching options categorized by how easy or difficult they are to implement Some for example can work in a large lecture class without a great expenditure of time others may require more preparation and a more adventurous approach to teaching Each strategy is accompanied by a table categorizing its likely impact how much time it will take in class or out and how difficult it will be to implement Like scientific research teaching works best when faculty start with a goal in mind plan an approach building on the literature use well tested methodologies and analyze results for future trials Linda Hodges message is that with such intentional thought and a bit of effort faculty can succeed in helping many more students gain exciting new skills and abilities whether those students are potential scientists or physicians or entrepreneurs Her book serves as a mini compendium of current research as well as a protocol manual a readily accessible guide to the literature the best practices known to date and a framework for thinking about teaching      **The End of Composition Studies** David W Smit,2007-03-29 Setting forth

an innovative new model for what it means to be a writing teacher in the era of writing across the curriculum *The End of Composition Studies* urges a reconceptualization of graduate work in rhetoric and composition systematically critiques the limitations of current pedagogical practices at the postsecondary level and proposes a reorganization of all academic units David W Smit calls into question two major assumptions of the field that writing is a universal ability and that college level writing is foundational to advanced learning Instead Smit holds writing involves a wide range of knowledge and skill that cannot be learned solely in writing classes but must be acquired by immersion in various discourse communities in and out of academic settings *The End of Composition Studies* provides a compelling rhetoric and rationale for eliminating the field and reenvisioning the profession as truly interdisciplinary a change that is necessary in order to fulfill the needs and demands of students instructors administrators and our democratic society
