Structure And Process In Speech Perception:

Structure and Process in Speech Perception, 1975 **Structure and Process in Speech Perception** A. Cohen, S.G. Nootboom, 2013-03-08 The purpose of the Symposium was to provide a meeting place for those working in the field of speech perception whose main interest is in the study of the perceptual processes in the decoding of connected speech hence the title *Dynamic Aspects of Speech Perception* It was felt after the meeting of the 8th ICA in London and the 2nd Speech Communication Seminar in Stockholm 1974 that there should be an opportunity for an exchange of ideas on this topic with the emphasis on discussion and interpretation rather than on the presentation of experimental results The initiators set themselves up as a planning committee and asked the present editors to organize a symposium in Eindhoven at the Institute for Perception Research which has a well established tradition in perceptual work The present proceedings contain papers by contributors invited by the planning committee as well as discussions Most of the papers were circulated well in advance of the Symposium We arranged the material in five sections I Theoretical Issues in Speech Perception Research II Prosody in Speech Perception III Some Storage Properties of Speech Perception IV Short term context effects Dichotic listening Speech Perception in the very young V General discussion and tentative conclusions The order of papers is not the same as at the Symposium Two papers are printed that were not introduced orally by their authors viz *STRUCTURE AND PROCESS IN SPEECH PERCEPTION- PROCEEDINGS OF THE SYMPOSIUM ON DYNAMIC ASPECTS OF SPEECH PERCEPTION.* ,

Modularity and the Motor theory of Speech Perception Michael Studdert-Kennedy, Ignatius G. Mattingly, 2014-01-02 A compilation of the proceedings of a conference held to honor Alvin M Liberman for his outstanding contributions to research in speech perception this volume deals with two closely related and controversial proposals for which Liberman and his colleagues at Haskins Laboratories have argued forcefully over the past 35 years The first is that articulatory gestures are the units not only of speech production but also of speech perception the second is that speech production and perception are not cognitive processes but rather functions of a special mechanism This book explores the implications of these proposals not only for speech production and speech perception but for the neurophysiology of language language acquisition higher level linguistic processing the visual perception of phonetic gestures the production and perception of sign language the reading process and learning to read The contributors to this volume include linguists psycholinguists speech scientists neurophysiologists and ethologists Liberman himself responds in the final chapter

The Development of Speech Perception Judith Claire Goodman, Howard C. Nusbaum, 1994 This comprehensive collection of current research in the development of speech perception and perceptual learning documents the striking changes that take place both in early childhood and throughout life and speculates about the mechanisms responsible for those changes The findings reported from this rich and active field address the role of growing linguistic knowledge and experience and demonstrate that speech perception develops in a bidirectional interplay with several levels of linguistic structure and cognitive processes Examining transitions in the perceptual processing of speech from infancy to adulthood as well as what causes these transitions the contributors take up a broad range of issues that are central to constructing a theory of speech perception and to understanding the development of this ability These include the nature of infants early sensory proficiencies how these skills come to support the recognition of linguistic units developmental differences in the representation and processing of linguistic units the acquisition of early word patterns and a phonological system and the mechanisms behind perceptual learning The Development of Speech Perception is unique in attempting to integrate research involving infants young children and adults and in its thorough treatment of developmental issues in speech perception It systematically explores how adult perceptual abilities begin to develop from early infant capabilities and in doing so addresses several levels of linguistic processing
