provide best possible information about the quality of the software achieved through passing several tests This requirement can be met only if testing is a structured and monitored process This thesis presents the implementation of an approach which understands structured software testing as an integrated part of the software development life cycle The approach is based on several established models from software development quality assurance and software testing These models are discussed together with different commercial in house and Open Source tools used for the implementation of the approach A framework is described for automated test execution test results processing archiving of test data and web based test data management An example is given where this framework has been introduced to a software company Based on a specific quality approach the measurable quality improvement of the test process due to the introduction of the framework is presented
