block and the loop block the three fundamental programming structures to perform each task The text describes the Turbo Basic environment on an IBM PC or compatible the fundamental programming structures and concepts the two data structures arrays files graphics creation as well as computer simulations The book explains in detail variables screen formatting the decision block the loop block functions The text also discusses parameter lists and libraries The student learns to use the OPEN statement to associate a buffer with a file or the CLOSE statement to end the file buffer The text explains the use of the Turbo BASIC random generator that produces unique sequences of random numbers The book can be used in introductory lecture courses in business computer science or mathematics It can be beneficial for students in an open entry open exit computer laboratory courses or for self study

Structured BASIC Programming on IBM Personal Computers John Castek,1988-02-05 This text focuses on the modern technique of top down design and structured programming as applied to the BASIC programming language It provides the tools to design programs that are both flexible and easily understood while paving the way for further computer language study Examples and exercises throughout the text cover a variety of disciplines including math business education and science Long meaningful variable names are used in all program examples giving students easy access to the rudiments of program design Design programs presented in pseudocode can be used in any problem solving situation for any programming language Includes chapter objectives extensive program examples along with complete designs of the solutions chapter summaries and end of chapter exercises and programming problems to aid students in problem solving skills
