Seminal Contributions to Information Systems Engineering Janis Bubenko,John Krogstie,Oscar Pastor,Barbara Pernici,Colette Rolland,Arne Sølvberg,2013-06-13 In 2013 the International Conference on Advance Information Systems Engineering CAiSE turns 25 Initially launched in 1989 for all these years the conference has provided a broad forum for researchers working in the area of Information Systems Engineering To reflect on the work done so far and to examine prospects for future work the CAiSE Steering Committee decided to present a selection of seminal papers published for the conference during these years and to ask their authors all prominent researchers in the field to comment on their work and how it has developed over the years The scope of the papers selected covers a broad range of topics related to modeling and designing information systems collecting and managing requirements and with special attention to how information systems are engineered towards their final development and deployment as software components With this approach the book provides not only a historical analysis on

how information systems engineering evolved over the years but also a fascinating social network analysis of the research community. Additionally, many inspiring ideas for future research and new perspectives in this area are sparked by the intriguing comments of the renowned authors.

**Advanced Information Systems Engineering** Matthias Jarke, Andreas Oberweis, 2003-05-21. This book constitutes the refereed proceedings of the 11th International Conference on Advanced Information Systems Engineering CAiSE 99 held in Heidelberg, Germany, in June 1999. The 27 revised full papers presented together with 12 short research papers and two invited contributions were carefully selected from a total of 168 submissions. The papers are organized in topical sections on components, information systems management, method engineering, data warehouses, process modeling, CORBA and distributed information systems, workflow systems, heterogeneous databases, and information systems dynamics.

*Proceedings, International Symposium on Multimedia Software Engineering*, 2000. Sixty-four papers from the December 2000 symposium discuss the technical aspects of specifying, designing, implementing, and evaluating multimedia software systems. The papers cover such areas as multimedia architecture, requirements, and design specification, user interface design, Internet applications, intelligent systems, signal and image processing, and databases. Topics include distributed speech recognition services, hierarchical case representation for software reuse, using SDL for implementing a wireless medium access control protocol, image coding using SMVQ with two-level block classifier, and a multimedia software for the analysis and design of circuits and electronics. **Modeling and Transformation of Workflows with Temporal Constraints** Wolfgang Gruber, 2004. Workflow management systems support the execution of business processes. They require the modeling of the processes they drive, the actual enactment of process instances, and they document the business process execution. Many different modeling languages and systems have been developed for design and representation of business processes and workflows as a consequence of different requirements, different purposes, and also different schools and modeling philosophies. The differences are partly on a conceptual level in the sense that the modeling languages offer different concepts and constructs, and partly on the representation level where basically the same constructs are represented differently, e.g., text or graph based. This book makes two important contributions to workflow modeling. First, it provides a meta-model based on abstract modeling concepts, allowing to overcome representation differences of workflow descriptions, and secondly, it introduces a set of equivalence transformations on workflow models. Such transformations are an important tool for workflow developments as they allow representing workflows differently for different purposes. These transformations are used in algorithms for checking the ability of temporal constraints in workflow definitions, and using this apparatus, it was possible to develop a great sophisticated time management system for workflows which not only checks temporal constraints but can also be used to develop time plans for workflow execution.
