Masonry Structural Design emphasizes the strength design of masonry and includes allowable stress provisions. Innovations such as autoclaved aerated concrete (AAC) masonry are also discussed. Real-world case studies featuring a low-rise building with reinforced concrete masonry and a four-story building with clay masonry illustrate the techniques presented in this comprehensive resource. Coverage includes basic structural behavior and design of low-rise bearing wall buildings; materials used in masonry construction; code basis for structural design of masonry buildings, including seismic design; introduction of MSJC treatment of structural design; strength design of reinforced and unreinforced masonry elements; allowable stress design of reinforced and unreinforced masonry elements; comparison of design by the allowable stress approach versus the strength approach; lateral load analysis of shear wall structure; design and detailing of floor and roof diaphragms. *Mechanics of Structures and Materials*.
