## **Structural Account Of Mathematics:**

A Structural Account of Mathematics Charles S. Chihara, 2004 Charles Chihara's new book develops and defends a structural view of the nature of mathematics and uses it to explain a number of striking features of mathematics that have puzzled philosophers for centuries. The view is used to show that in order to understand how mathematical systems are applied in science and everyday life it is not necessary to assume that its theorems either presuppose mathematical objects or are even true. Chihara builds upon his previous work in which he presented a new system of mathematics, the constructibility theory, which did not make reference to or presuppose mathematical objects. Now he develops the project further by analysing mathematical systems currently used by scientists to show how such systems are compatible with this nominalistic outlook. He advances several new ways of undermining the heavily discussed indispensability argument for the existence of mathematical objects, made famous by Willard Quine and Hilary Putnam. And Chihara presents a rationale for the nominalistic outlook that is quite different from those generally put forward, which he maintains have led to serious misunderstandings. **A Structural Account of Mathematics** will be required reading for anyone working in this field. **Proof**

**and Other Dilemmas** Bonnie Gold, Roger A. Simons, 2008 During the first 75 years of the twentieth century almost all work in the philosophy of mathematics concerned foundational questions. In the last quarter of the century philosophers of mathematics began to return to basic questions concerning the philosophy of mathematics, such as what is the nature of mathematical knowledge and of mathematical objects, and how is mathematics related to science. Two new schools of philosophy of mathematics, social constructivism and structuralism, were added to the four traditional views: formalism, intuitionism, logicism, and platonism. The advent of the computer led to proofs and the development of mathematics assisted by computer, and to questions of the role of the computer in mathematics. This book of 16 essays, all written specifically for this volume, is the first to explore this range of new developments in a language accessible to mathematicians. Approximately half the essays were written by mathematicians and consider questions that philosophers are not yet discussing. The other half, written by philosophers of mathematics, summarize the discussion in that community during the last 35 years. In each case a connection is made to issues relevant to the teaching of mathematics. **God and Abstract Objects** William Lane

Craig, 2017-09-05 This book is an exploration and defense of the coherence of classical theism's doctrine of divine aseity in the face of the challenge posed by Platonism with respect to abstract objects. A synoptic work in analytic philosophy of religion, the book engages discussions in philosophy of mathematics, philosophy of language, metaphysics, and metaontology. It addresses absolute creationism, non-Platonic realism, fictionalism, neutralism, and alternative logics and semantics, among other topics. The book offers a helpful taxonomy of the wide range of options available to the classical theist for dealing with the challenge of Platonism. It probes in detail the diverse views on the reality of abstract objects and their compatibility with classical theism. It contains a most thorough discussion rooted in careful exegesis of the biblical and patristic basis of the

doctrine of divine aseity Finally it challenges the influential Quinean metaontological theses concerning the way in which we make ontological commitments

**Objectivity, Realism, and Proof** Francesca Boccuni, Andrea Sereni, 2016-07-05 This volume covers a wide range of topics in the most recent debates in the philosophy of mathematics and is dedicated to how semantic epistemological ontological and logical issues interact in the attempt to give a satisfactory picture of mathematical knowledge The essays collected here explore the semantic and epistemic problems raised by different kinds of mathematical objects by their characterization in terms of axiomatic theories and by the objectivity of both pure and applied mathematics They investigate controversial aspects of contemporary theories such as neo logicist abstractionism structuralism or multiversism about sets by discussing different conceptions of mathematical realism and rival relativistic views on the mathematical universe They consider fundamental philosophical notions such as set cardinal number truth ground finiteness and infinity examining how their informal conceptions can best be captured in formal theories The philosophy of mathematics is an extremely lively field of inquiry with extensive reaches in disciplines such as logic and philosophy of logic semantics ontology epistemology cognitive sciences as well as history and philosophy of mathematics and science By bringing together well known scholars and younger researchers the essays in this collection prompted by the meetings of the Italian Network for the Philosophy of Mathematics FilMat show how much valuable research is currently being pursued in this area and how many roads ahead are still open for promising solutions to long standing philosophical concerns Promoted by the Italian Network for the Philosophy of Mathematics FilMat
