

DESIGN OF STRUCTURAL STEELWORK ELEMENTS (BS 5950)

By: Dr Mohamed Careem

INTRODUCTION FOR BEAM DESIGN

- The top flange of a simply supported beam subject to gravity loads will be in compression and like any element in compression will try to buckle.
- The bottom flange is in tension and will try to remain straight. Therefore, if there is insufficient restraint to the top flange, it will buckle laterally, i.e. out of the plane of the applied load.
- The lateral buckling of the compression flange of a beam involves lateral torsional buckling.
- A restrained beam is one in which the compression flange is supported from buckling.

Structural Design Brian Currie, Robert A. Sharpe, 1990 There are many books available which explain structural theory and allow the question Why is it done to be answered However it does appear that there is a need to produce a book which illustrates how the available information is used to produce a structurally sound solution It is hoped that this publication will go some way in meeting that need The design calculations have been done by hand on calculation sheets with the aim of exposing the student to normal office practice These sheets have in the left hand margin referred to the various clauses of the British Standards It

is expected that the student will have available either the full standards or the publication Extracts from British Standards for Students of Structural Design *Structural Steel Design to BS 5950: Part 1* Frixos Joannides, Alan Weller, 2002 BS 5950 the design code for structural steel has been greatly revised Joannides and Weller introduce the new code and provide the necessary information for design engineers to implement the code when designing steel structures in the UK *Kempe's Engineers Year-book* ,1995 *Structural Steelwork* Thomas Joseph MacGinley, T.
