## **Structuring Events A Study In The Semantics Of Lexical Aspect:**

*Structuring Events* Susan Rothstein,2008-04-15 *Structuring Events* presents a novel semantic theory of lexical aspect for anyone interested in the study of verb meanings Provides an introduction to aspectual classes and aspectual distinctions Utilizes case studies to present a novel semantic theory of lexical aspect and compare it with alternative theories Useful for students and scholars in semantics and syntax as well as the neighboring fields of pragmatics and philosophy of language

**Structuring Events** Susan Rothstein,2004-01-26 *Structuring Events* presents a novel semantic theory of lexical aspect for anyone interested in the study of verb meanings Provides an introduction to aspectual classes and aspectual distinctions Utilizes case studies to present a novel semantic theory of lexical aspect and compare it with alternative theories Useful for students and scholars in semantics and syntax as well as the neighboring fields of pragmatics and philosophy of language

*The Oxford Handbook of Event Structure* Robert Truswell,2019-03-26 This handbook deals with research into the nature of events and how we use language to describe events The study of event structure over the past 60 years has been one of the most successful areas of lexical semantics uniting insights from morphology and syntax lexical and compositional semantics cognitive science and artificial intelligence to develop insightful theories of events and event descriptions This volume provides accessible introductions to major topics and ongoing debates in event structure research exploring what events are how we perceive them how we reason with them and the role they play in the organization of grammar and discourse The chapters are divided into four parts the first covers metaphysical issues related to events the second is concerned with the relationship between event structure and grammar the third is a series of crosslinguistic case studies and the fourth deals with links to cognitive science and artificial intelligence more broadly The book is strongly interdisciplinary in nature with insights from linguistics philosophy psychology cognitive science and computer science and will appeal to a wide range of researchers and students from advanced undergraduate level upwards

**Ten Lectures on Event Structure in a Network Theory of Language** Nikolas Gisborne,2020-08-31 In *Ten Lectures on Event Structure in a Network Theory of Language* Nikolas Gisborne explores verb meaning He discusses theories of events and how a network model of language in the mind should be theorized what the lexicon is how to probe word meaning evidence for structure in word meaning polysemy the lexical semantics of causation a type hierarchy of events and event types cross linguistically He also looks at the relationship between different classes of events or event types and aktionsarten transitivity alternations and argument linking Gisborne argues that the social and cognitive embedding of language requires a view of linguistic structure as a network where even the analysis of verb meaning can require an understanding of the role of speaker and hearer

[Studies in the Composition and Decomposition of Event Predicates](#) Boban Arsenijević,Berit Gehrke,Rafael Marín,2013-02-26 This detailed perceptive addition to the linguistics literature analyzes the semantic components of event predicates exploring their fine grained elements as well as their agency in linguistic processing The papers go beyond pure semantics to consider their

varying influences of event predicates on argument structure aspect scalarity and event structure The volume shows how advances in the linguistic theory of event predicates which have spawned Davidsonian and neo Davidsonian notions of event arguments in addition to event structure frameworks and mereological models for the eventuality domain have sidelined research on specific sets of entailments that support a typology of event predicates Addressing this imbalance in the literature the work also presents evidence indicating a more complex role for scalar structures than currently assumed It will enrich the work of semanticists psycholinguists and syntacticians with a decompositional approach to verb phrase structure

**Cognitive Science Perspectives on Verb Representation and Processing** Roberto G. de Almeida, Christina Manouilidou, 2014-12-08 Verbs play an important role in how events states and other happenings are mentally represented and how they are expressed in natural language Besides their central role in linguistics verbs have long been prominent topics of research in analytic philosophy mostly on the nature of events and predicate argument structure and a topic of empirical investigation in psycholinguistics mostly on argument structure and its role in sentence comprehension More recently the representation of verb meaning has been gaining momentum as a topic of research in other cognitive science branches notably neuroscience and the psychology of concepts The present volume is an expression of this recent surge in the investigation of verb structure and meaning from the interdisciplinary perspective of cognitive science with up to date contributions by theoretical linguists philosophers psycholinguists and neuroscientists The volume presents new theoretical and empirical studies on how verb structure and verb meaning are represented how they are processed during language comprehension how they are acquired and how they are neurologically implemented **Cognitive Science Perspectives on Verb Representation and Processing** is a reflection of the recent collaboration between the disciplines that constitute cognitive science bringing new empirical data and theoretical insights on a key element of natural language and conceptualization

*Methodologies in Semantic Fieldwork* M. Ryan Bochnak, Lisa Matthewson, 2015 This volume brings together papers that discuss methodological issues in conducting elicitation on semantic topics in a fieldwork situation Each author pairs explicit methodological proposals with concrete examples of their use in the field The range of languages discussed span 11 language families and four continents

**Revisiting Aspect and Aktionsart** Francis G. H. Pang, 2016-02-02 In **Revisiting Aspect and Aktionsart** Francis G H Pang employs a corpus approach to analyze the relationship between Greek aspect and Aktionsart Recent works have tried to predict the meanings that emerge when a certain set of clausal factors and lexical features combine with one of the grammatical aspects Most of these works rely heavily on Zeno Vendler's telicity distinction Based on empirical evidence Pang argues that telicity and perfectivity are not related in a systematic manner in Koine Greek As a corollary Aktionsart should be considered an interpretive category meaning that its different values emerge not from the interaction of only one or two linguistic parameters but from the process of interpreting language in context

**Space and Time in Languages and Cultures** Luna Filipovi?, Kasia M. Jaszczolt, Katarzyna Jaszczolt, 2012 This volume offers novel

insights into linguistic diversity in the domains of spatial and temporal reference searching for uniformity amongst diversity

A number of authors discuss expression of dynamic spatial relations cross linguistically in a vast range of typologically different languages such as Bezhta French Hinuq Italian Japanese Polish Serbian and Spanish among others The contributions on linguistic expression of time all shed new light on pertinent questions regarding this cognitive domain such as the hotly debated relationship between cross linguistic differences in talking about time and universal principles of utterance interpretation modelling temporal inference through aspectual interactions as well as the complexity of the acquisition of tense aspect relations in a second language The topic of space and time in language and culture is also represented from a different point of view in the sister volume *Space and Time in Languages and Cultures Language Culture and Cognition HCP 37* which discusses spatial and temporal constructs in human language cognition and culture in order to come closer to a better understanding of the interaction between shared and individual characteristics of language and culture that shape the way people interact with each other and exchange information about the spatio temporal constructs that underlie their cognitive social and linguistic foundations

Annual Workshop on Formal Approaches to Slavic Linguistics, 2008      □□□□, 2005      **The Discourse Potential of Underspecified Structures** Anita Steube, 2008

The volume demonstrates the interdependence of man's language capacity and his other conceptual capacities This enables linguistic structures to be minimalised and for extra linguistic domains to provide much of the interpretations of sound and meaning Underspecification is demonstrated in the word formation of Indo European Late Archaic Chinese and modern Khmer on the word and sentence levels by the event structures of German and in the information structure predominantly of languages with the so called free word order German Slavic languages Arabic compared with English and the tone language Hausa The volume is noteworthy due to the close cooperation between theoretical and experimental research Within grammar it has especially strengthened prosodic research and the syntax phonology interrelations and their interpretations and it has helped to create data bases for the relations within texts and to evaluate the findings

*Lexical Semantics, Syntax, and Event Structure* Malka Rappaport Hovav, Edit Doron, Ivy Sichel, 2010

This book focuses on the linguistic representation of temporality in the verbal domain and its interaction with the syntax and semantics of verbs arguments and modifiers Leading scholars explore the division of labour between syntax compositional semantics and lexical semantics in the encoding of event structure encompassing event participants and the temporal properties associated with events They examine the interface between event structure and the systems with which it interacts including the interface between event structure and the syntactic realization of arguments and modifiers Deploying a variety of frameworks and theoretical perspectives they consider central issues and questions in the field among them whether argument structure is specified in the lexical entries of verbs or syntactically constructed so that syntactic position determines thematic status whether the hierarchical structure evidenced in argument structure find parallels in sign language should the relation between members

of an alternation pair such as the causative inchoative alternation be understood lexically or derivationally and the role of syntactic category in determining the configuration of argument structure

**Proceedings of the 27th West Coast Conference on Formal Linguistics** Natasha Abner, Jason Bishop, 2008 This volume contains 52 of the 59 papers from the 27th West Coast Conference on Formal Linguistics WCCFL 27 which was held at the University of California Los Angeles on May 16-18 2008 The authors present new work in syntax semantics morphology and phonology The proceedings includes Elliott Moreton's plenary paper Modelling Modularity Bias in Phonological Pattern Learning *Proceedings of the ... Amsterdam Colloquium*, 2001 *Journal of Slavic Linguistics*, 2004

**On the Compositional Nature of Stativity** E. Matthew Husband, 2010 Since at least Verkuyl 1972 aktionsart has been considered a property of phrasal configurations minimally resulting from a combination of a predicate and its internal argument This has been demonstrated most clearly in the literature on telicity where certain predicate argument configurations allow for a telic interpretation while others permit only an atelic interpretation The properties shared by nominals and events and the manner of their composition has been the source of much debate leading to a rich literature on the composition of events Largely left out of this debate however has been the role that arguments might play if any at all in the composition of states This dissertation explores the role arguments and predicates play in determining the availability of an existential interpretation of a stative subject one property distinguishing between the stage level and individual level behavior of predicates It develops a theory of aktionsart in which quantization the opposition of quantized and homogeneous structures plays a central role in determining the aspectual behavior of stative predicates It argues that the distinction between stage level and individual level states is determined compositionally taking into account properties of the predicate both verbal and adjectival and its arguments I begin by observing two empirical puzzles which affect the availability of existential interpretation the effects of internal arguments in verbal statives first observed in Fernald 1994 and the scale structure effects of adjectival predicates Pursuing an analogy between the availability of existential interpretation in states and telicity in events I explore the possible role verbs in stative predicates play in determining the existential interpretation of their subject ultimately arguing that there are no individual level or stage level verbs I then turn to the role played by verbal arguments in stative predicates I propose in opposition to topic comment theories of the internal argument effects that the quantization of the object of transitive stative verbs determines whether they license an existential interpretation of their subject Predicates with quantized objects license an existential interpretation while those with homogeneous objects do not Given the structural analogy between the availability of existential interpretation and telicity I propose that stative and eventive predicates are composed by the same mechanisms with the distinction between states and events arising from the selectional restrictions on Voice following Kratzer 1996 2004 I then turn to adjectival predicates and the observation that their scale structure influences the availability of existential interpretation I demonstrate that scale structure is a type of quantization closed scales are quantized open scales are

homogeneous and argue that this compositionally determines their stage level individual level behavior I further consider the role arguments play in determining the availability of existential interpretation observing that as with telicity the quantization of arguments affects a predicate s stage level individual level behavior The dissertation closes with an overview of its content and presents a highly speculative discussion on the role played by quantization in language and the possible role it may play in vision suggesting that quantization may be a core component of cognition more generally The dissertation citations contained here are published with the permission of ProQuest llc Further reproduction is prohibited without permission Copies of dissertations may be obtained by Telephone 800 1 800 521 0600 Web page <http://www.proquest.com/en-US/products/dissertations/individuals.shtml>      **Proceedings from the Parasessions of the Chicago Linguistic Society's ... Meeting** Chicago Linguistic Society. Meeting,2005      **Event Arguments** Claudia Maienborn,Angelika Wöllstein-Leisten,2005 Since entering the stage Davidsonian event arguments have taken on a central role in linguistic theorizing Recent years have seen a continuous extension of possible applications for them not only in semantics but also in syntax At the same time questions concerning the ontological status of events have received renewed attention This collection of articles provides new evidence for the virtually ubiquitous presence of event arguments in linguistic structure and sheds new light on their nature The volume is organized into four sections Events states causation Event nominals Events in composition Measuring events      [MIT Working Papers in Linguistics](#) ,2009
