

## Process Termination (Revisited)

- The terminating process needs to be able to notify its parent how it terminated
- The three exit functions use the **exit status** argument
- For abnormal termination, the kernel generates a **termination status** to describe the reason for the termination
- When `_exit` is finally called, the kernel converts the exit status to a termination status
- The parent process can obtain the termination status from either the `wait` or `waitpid` function (to be covered soon)
