*Method and Order in Renaissance Philosophy of Nature* Daniel A. Di Liscia, Eckhard Kessler, Charlotte Methuen, 1997 The volume results from a seminar sponsored by the Foundation for Intellectual History at the Herzog August Bibliothek Wolfenb 1 4ttel in 1992 Starting with the theory of regressus as displayed in its most developed form by William Wallace these papers enter the vast field of the Renaissance discussion on method as such in its historical and systematical context This is confined neither to the notion of method in the strict sense nor to the Renaissance in its exact historical limits nor yet to the Aristotelian tradition as a well defined philosophical school but requires a new scholarly approach Thus besides Galileo Zabarella and their circles which are regarded as being crucial for the emergence of modern science in the end of the 16th century the contributors deal with the ancient and medieval origins as well as with the early modern continuity of the Renaissance concepts of method and with non regressive methodologies in the various approaches of Renaissance natural philosophy including the Lutheran and Calvinist traditions

Medieval Science and Technology Elspeth Whitney, 2004-10-30 Medieval science and technology was firmly rooted in Aristotelian explanations of the physical world This book begins by introducing the basic concepts of the classical tradition and explains how these ideas were promulgated by the ancient Greeks preserved and commented on by the great Muslim scholars of the early middle ages and finally transmitted to western Europe as that region began to grow and expand around 1100 C E Specific avenues of inquiry such as astronomy and astrology optics chemistry and alchemy zoology geography and medicine are described on their own terms Rounding out the work is a discussion of the many technological innovations of the medieval age such as mechanical clocks firearms and the blast furnace that profoundly altered the course of European and world history Biographical sketches provide insight into the lives and accomplishments of 20 men and women Christian Muslim and pagan whose works profoundly shaped the era's scientific spirit Eleven annotated key primary documents afford a fascinating glimpse into how the best minds of the time posed their questions and their answers An annotated timeline glossary of terms several illustrations and an annotated bibliography round out the work Medieval scientists or natural philosophers as they were then called were powerfully influenced by the authority of older traditions including Christianity and scientific ideas dating back to Plato Aristotle and Ptolemy Yet their respect for these traditions was balanced by an equal respect for reason and the spirit of inquiry Religious faith far from dampening scientific and technological innovation actually buttressed their efforts to understand the natural world as it was generally taken for granted that knowledge acquired through reason would harmonize with religious beliefs While medieval science and technology did not seek to overthrow the prevailing worldviews of the time their accomplishments did lay the groundwork for the scientific revolution and European global expansion of the early modern age

De uiris illustribus John Leland, 2010 Equipped with some sort of commission from Henry VIII John Leland began to record the contents of English monastic libraries in 1533 and carried on until 1536 or shortly after when the first dissolutions occurred His booklists were compiled in preparation for his comprehensive dictionary of British writers entitled *De uiris illustribus* This remarkable document a proto Dictionary of National Biography lay incomplete at Leland's death The sole extant witness is the autograph manuscript now Oxford Bodleian Library MS Top gen c 4 Although antiquaries made use of *De uiris illustribus* over the next generations it did not see its way into print until 1709 when Anthony Hall produced a sometimes inaccurate edition a significant number of passages omitted under the title *Commentarii de scriptoribus Britannicis* Hall's text has formed the basis for subsequent scholarship Carley's new edition is based on a

thorough examination of the autograph supplemented with readings from John Bale's epitome now Cambridge Trinity College MS R 7 15 753 The original order of Leland's text in instances where Hall was misled by multiple accretions has been restored and longer omitted passages have been included This new edition establishes how unreliable and misleading Hall's was in many respects The facing English translation seeks to capture Leland's own excitement with his project and also to convey his shifts in interpretation during the process of revision the text mirrors in miniature the stages of the English reformation under Henry VIII The extensive introduction provides a full history of the manuscript examines sources and shows the relationship of the text to Leland's booklists and other contemporary documents **In Synchrony with the Heavens** David A.
