Gorny,Michael J. Tauber,1990 *Design of Visualizations for Human-Information Interaction* Kamran Sedig,Paul Parsons,2016-04-18 Interest in visualization design has increased in recent years While there is a large body of existing work from which visualization designers can draw much of the past research has focused on developing new tools and techniques that are aimed at specific contexts Less focus has been placed on developing holistic frameworks models and theories that can guide visualization design at a general level a level that transcends domains data types users and other contextual factors In addition little emphasis has been placed on the thinking processes of designers including the concepts that designers use while they are engaged in a visualization design activity In this book we present a general holistic framework that is intended to support visualization design for human information interaction The framework is composed of a number of conceptual elements that can aid in design thinking The core of the framework is a pattern language consisting of a set of 14 basic abstract patterns and a simple syntax for describing how the patterns are blended We also present a design process made up of four main stages for creating static or interactive visualizations The 4 stage design process places the patterns at the core of designers thinking and employs a number of conceptual tools that help designers think systematically about

creating visualizations based on the information they intend to represent Although the framework can be used to design static visualizations for simple tasks its real utility can be found when designing visualizations with interactive possibilities in mind in other words designing to support a human information interactive discourse This is especially true in contexts where interactive visualizations need to support complex tasks and activities involving large and complex information spaces The framework is intended to be general and can thus be used to design visualizations for diverse domains users information spaces and tasks in different fields such as business intelligence health and medical informatics digital libraries journalism education scientific discovery and others Drawing from research in multiple disciplines we introduce novel concepts and terms that can positively contribute to visualization design practice and education and will hopefully stimulate further research in this area

Adaptive and Personalized Visualization Alvitta Ottley, 2020-03-18 There is ample evidence in the visualization community that individual differences matter These prior works highlight various personality traits and cognitive abilities that can modulate the use of the visualization systems and demonstrate a measurable influence on speed accuracy process and attention Perhaps the most important implication of this body of work is that we can use individual differences as a mechanism for estimating when a design is effective or to identify when people may struggle with visualization designs These effects can have a critical impact on consequential decision making processes One study that appears in this book investigated the impact of visualization on medical decision making showed that visual aides tended to be most beneficial for people with high spatial ability a metric that measures a person s ability to represent and manipulate two or three dimensional representations of objects mentally The results showed that participants with low spatial ability had difficulty interpreting and analyzing the underlying medical data when they use visual aids Overall approximately 50% of the studied population were unsupported by the visualization tools when making a potentially life critical decision As data fluency continues to become an essential skill for our everyday lives we must embrace the growing

need to understand the factors that may render our tools ineffective and identify concrete steps for improvement This book presents my current understanding of how individual differences in personality interact with visualization use and draws from recent research in the Visualization Human Computer Interaction and Psychology communities We focus on the specific designs and tasks for which there is concrete evidence of performance divergence due to personality Additionally we highlight an exciting research agenda that is centered around creating tailored visualization systems that are aligned with people s abilities The purpose of this book is to underscore the need to consider individual differences when designing and evaluating visualization systems and to call attention to this critical research direction
