The Experiment in the History of Economics Philippe Fontaine, Robert Leonard, 2005-07-12 Throughout the history of economic ideas it has often been asserted that experimentation is impossible yet in fact history shows that the idea of experimentation has always been important and as such has been interpreted and put to use in many ways Rich in historical detail the essays in this topical volume deal with such issues as laboratory experimentation the observed transition from a post war economics to a contemporary discipline the contrasting positions of Friedrich Hayek and Oskar Morgenstern the socio economic experiments proposed by Ernest Solvay and Knut Wicksell and a rigorous examination of the way in which economic models can or cannot be construed as valid experiments producing useful knowledge A testament to the variety of ways in which experimentation has been of importance in the creation of economic knowledge these wide ranging essays will interest those seeking to expand their historical understanding of the discipline be they theorists historians philosophers advanced students or researchers

The Logic of Adaptive Sequential Experimentation in Policy Design Haipeng Xing,Xiaobo Zhang,2013-06-26

Inspired by the wide adoption of rigorous randomized controlled trials RCTs in medical research economists and other social scientists have increasingly used RCTs in their research As researchers pick up projects amenable to the RCT methodology they likely leave out important questions to which RCTs cannot be directly applied As a result RCTs have been criticized for the proclivity of addressing trivial questions As a matter of fact in medical research RCTs are an integral part of adaptive sequential experiment design a few steps must be taken to screen out drugs that have toxins and strong side effects before running any RCTs on humans In this paper we argue that economists can learn a great deal from the design principles implemented in medical research We develop a theoretical model to show the logic of adaptive sequential experiment design in the presence of uncertainty over negative effects and discuss how to choose samples in a population to minimize the experiment cost We also point out the applications of our proposed framework in the economic domain such as economic reforms and new product design
